**IoT-based Intelligent Modelling for Environmental and Ecological Engineering** Paul Krause, Fatos Xhafa, 2021-05-31. This book brings to readers thirteen chapters with contributions to the benefits of using IoT and Cloud Computing to agro ecosystems from a multi disciplinary perspective. IoT and Cloud systems have prompted the development of a Cloud digital ecosystem referred to as Cloud to thing continuum computing. The key success of IoT computing and the Cloud digital ecosystem is that IoT can be integrated seamlessly with the physical environment and therefore has the potential to leverage innovative services in agro ecosystems. Areas such as ecological monitoring, agriculture, and biodiversity constitute a large area of potential application of IoT and Cloud technologies. In contrast to traditional agriculture systems that have employed aggressive policies to increase productivity, new agro ecosystems aim to increase productivity but also achieve efficiency and competitiveness in modern sustainable agriculture and contribute more broadly to the green economy and sustainable food chain industry. Fundamental research as well as concrete applications from various real life scenarios such as smart farming, precision agriculture, green agriculture, sustainable livestock and sow farming, climate threat and societal and environmental impacts is presented. Research issues and challenges are also discussed towards envisioning efficient and scalable solutions to agro ecosystems based on IoT and Cloud technologies. Our fundamental belief is that we can collectively trigger a new revolution that will transition agriculture into an equitable system that not only feeds the world but also contributes to mitigating the climate change and biodiversity.

crises that our historical actions have triggered *Intelligent Data Analytics for Power and Energy Systems* Hasmat Malik, Md. Waseem Ahmad, D.P. Kothari, 2022-02-17 This book brings together state of the art advances in intelligent data analytics as driver of the future evolution of PaE systems In the modern power and energy PaE domain the increasing penetration of renewable energy sources RES and the consequent empowerment of consumers as a central and active solution to deal with the generation and development variability are driving the PaE system towards a historic paradigm shift The small scale diversity and especially the number of new players involved in the PaE system potentiate a significant growth of generated data Moreover advances in communication between IoT devices and M2M machine to machine man to machine etc and digitalization hugely increased the volume of data that results from PaE components installations and systems operation This data is becoming more and more important for PaE systems operation maintenance planning and scheduling with relevant impact on all involved entities from producers consumer s and aggregators to market and system operators However although the PaE community is fully aware of the intrinsic value of those data the methods to deal with it still necessitate substantial enhancements development and research Intelligent data analytics is thereby playing a fundamental role in this domain by enabling stakeholders to expand their decision making method and achieve the awareness on the PaE environment The editors also included demonstrated codes for presented problems for better understanding for beginners
