Field-programmable Logic and Applications ,2002 Analysis, Architectures and Modelling of Embedded Systems Achim Rettberg,Mauro C. Zanella,Michael Amann,Michael Keckeisen,Franz J. Rammig,2009-09-04 This book presents the technical program of the International Embedded Systems Symposium IESS 2009 Timely topics techniques and trends in embedded system design are covered by the chapters in this volume including modelling simulation verification test scheduling platforms and processors Particular emphasis is paid to automotive systems and wireless sensor networks Sets of actual case studies in the area of embedded system design are also included Over recent years embedded systems have gained an enormous amount of processing power and functionality and now enter numerous application areas due to the fact that many of the formerly external components can now be integrated into a single System on Chip This tendency has resulted in a dramatic reduction in the size and cost of embedded systems As a unique technology the design of embedded systems is an essential element of many innovations Embedded systems meet their performance goals including real time constraints through a combination of special purpose hardware and software components tailored to the system requirements Both the development of new features and the reuse of existing intellectual property components are essential to keeping up with ever more demanding customer requirements Furthermore design complexities are steadily growing with an increasing number of components that have to cooperate properly Embedded system designers have to cope with multiple goals and constraints simultaneously including timing power reliability
