

ONCOLOGY - BASICS

- Cancer is a group of diseases that are characterized by uncontrolled proliferation (division) of abnormal cells.
- Every minute, ten million cells divide in human body.
- Normally, cell division, accompanied by growth and specialized development, takes place in an orderly pattern.
- But when a cell becomes malignant (cancerous), it acts in profoundly abnormal ways.
- Cancer develops from a single cell that has undergone mutations(changes) in its DNA, the genetic material that carries the body's hereditary instructions.
- Instead of maturing normally and dying, cancerous cells reproduce without control.
- They not only divide faster, but also never stop dividing, and they fail to mature.
