**Specification and Design Methodology for Real-Time Embedded Systems** Randall S. Janka, 2012-12-06 Specification and design methodology has seen significant growth as a research area over the last decade tracking but lagging behind VLSI design technology in general and the CAD industry in particular The commercial rush to market tries to leverage existing technology which fuels CAD design tool development Paralleling this is very active basic and applied research to investigate and move forward rational and effective methodologies for accomplishing digital design especially in the field of hardware software codesign It is this close relationship between industry and academia that makes close cooperation between researchers and practitioners so important and monographs like this that combine both abstract concept and pragmatic implementation deftly bridge this often gaping chasm It was at the IEEE ACM Eighth International Symposium on Hardware Software Codesign where I met the author of this monograph Dr Randall Janka who was presenting some of his recent dissertation research results on specification and design methodology or as he has so succinctly defined this sometimes ambiguous concept the tools and rules Where so many codesign researchers are trying to prove out different aspects of codesign and using toy applications to do so Dr Janka had developed a complete specification and design methodology and prototyped the infrastructure and proven its viability utility and effectiveness using a demanding real world application of a real time synthetic aperture radar imaging processor that was implemented with embedded parallel processors

**Advances in Control Education 2000** Ljubisa Vlačić, M. L. Brisk, 2001 Advances in Control Education 2000 saw the additional sponsorship of the Institute of Electrical and Electronic Engineers IEEE Control System Society and the Institution of Engineers Australia National Committee on Automation Control Instrumentation One hundred and three authors from 31 countries submitted their full scale manuscripts Each received at least three reviews overseen and coordinated by the International Program Committee members Twenty six members of the International Program Committee participated in the review process All reviews were anonymous In many cases after writing initial assessments reviewers were put in touch with the Program Committee Co Chairman to discuss a paper further by e mail Sixty papers were selected

for full presentation Only those successfully presented at the conference are included in these proceedings Despite its small population Australia has always had a high level of international activity in control with Australian researchers contributing world leading academic work in control It has had a President of IFAC itself Professor Brian Anderson and many names are instantly recognisable at the forefront of developments in control theory It also has major industrial processes in minerals petrochemicals food and agricultural processing in manufacturing in transport and in communications that look to control for safety efficiency and reduced environmental impacts The education of engineers in the various aspects of control is thus of vital importance to Australia as it is to all developed and developing countries
