Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles Robert Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation

Improving Undergraduate Instruction in Science, Technology, Engineering, and Mathematics National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Undergraduate Science Education, Steering Committee on Criteria and Benchmarks for Increased Learning from Undergraduate STEM Instruction, 2003-05-28 Participants in this workshop were asked to explore

three related questions 1 how to create measures of undergraduate learning in STEM courses 2 how such measures might be organized into a framework of criteria and benchmarks to assess instruction and 3 how such a framework might be used at the institutional level to assess STEM courses and curricula to promote ongoing improvements The following issues were highlighted Effective science instruction identifies explicit measurable learning objectives Effective teaching assists students in reconciling their incomplete or erroneous preconceptions with new knowledge Instruction that is limited to passive delivery of information requiring memorization of lecture and text contents is likely to be unsuccessful in eliciting desired learning outcomes Models of effective instruction that promote conceptual understanding in students and the ability of the learner to apply knowledge in new situations are available Institutions need better assessment tools for evaluating course design and effective instruction Deans and department chairs often fail to recognize measures they have at their disposal to enhance incentives for improving education Much is still to be learned from research into how to improve instruction in ways that enhance student learning
