Chapter 3 Meromorphic Functions and the Logarithm

Yung-Hsiang Huang*

2017.11.05

Exercises

1. From the identity $\sin \pi z = \frac{e^{i\pi z} - e^{-i\pi z}}{2i}$, it's easy to show its zeros are exactly $n \in \mathbb{Z}$. Each of them is of order 1 by showing $(\frac{d}{dz} \sin \pi z)(n) \neq 0$. The residue of $\frac{1}{\sin \pi z}$ at $z = n$ is $\frac{(-1)^n}{\pi}$ by computing $\lim_{z \rightarrow n} \frac{z-n}{\sin \pi z}$ with the weak form of L'Hôpital's Rule.

2. Evaluate the integral

$$\int_{\mathbb{R}} \frac{dx}{1+x^2}$$

Proof. The computation is standard, see [1] Section 11.1

□

3. It's standard to compute the Fourier transform of 1-d Poisson Kernel for upper half plane. We omit it.
4. It's also standard to compute the Fourier transform of the conjugated Poisson Kernel (which is related to the Hilbert transform). We omit it.
5. Use contour integration to show that

$$\int_{\mathbb{R}} \frac{e^{-2\pi i \xi x}}{(1+x^2)^2} dx = \frac{\pi}{2} (1+2\pi|\xi|) e^{-2\pi|\xi|}$$

for all $\xi \in \mathbb{R}$.

Proof.

The Probability Lifesaver Steven J. Miller, 2017-05-16 The essential lifesaver for students who want to master probability For students learning probability its numerous applications techniques and methods can seem intimidating and overwhelming That's where The Probability Lifesaver steps in Designed to serve as a complete stand alone introduction to the subject or as a supplement for a course this accessible and user friendly study guide helps students comfortably navigate probability's terrain and achieve positive results The Probability Lifesaver is based on a successful course that Steven Miller has taught at Brown University Mount Holyoke College and Williams College With a relaxed and informal style Miller presents the math with thorough reviews of prerequisite materials worked out problems of varying difficulty and proofs He explores a topic first to build intuition and only after that does he dive into technical details Coverage of topics is comprehensive and materials are repeated for reinforcement both in the guide and on the book's website An appendix goes over proof techniques and video lectures of the course are available online Students using this book should have some familiarity with algebra and precalculus The

Probability Lifesaver not only enables students to survive probability but also to achieve mastery of the subject for use in future courses A helpful introduction to probability or a perfect supplement for a course Numerous worked out examples Lectures based on the chapters are available free online Intuition of problems emphasized first then technical proofs given Appendixes review proof techniques Relaxed conversational approach *Analysis as a Life* Sergei Rogosin,Ahmet Okay Çelebi,2019-01-30 This is a book comprising selected papers of colleagues and friends of Heinrich Begehr on the occasion of his 80th birthday It aims at being a tribute to the excellent achievements of Heinrich Begehr in complex analysis and complex differential equations and especially to his prominent role as one of the creators and long time leader of the International Society for Analysis its Applications and Computation ISAAC *Complex Analysis* Elias M. Stein,Rami Shakarchi,2010-04-22 With this second volume we enter the intriguing world of complex analysis From the first theorems on the elegance and sweep of the results is evident The starting point is the simple idea of extending a function initially given for real values of the argument to one that is defined when the argument is complex From there one proceeds to the main properties of holomorphic functions whose proofs are generally short and quite illuminating the Cauchy theorems residues analytic continuation the argument principle With this background the reader is ready to learn a wealth of additional material connecting the subject with other areas of mathematics the Fourier transform treated by contour integration the zeta function and the prime number theorem and an introduction to elliptic functions culminating in their application to combinatorics and number theory Thoroughly developing a subject with many ramifications while striking a careful balance between conceptual insights and the technical underpinnings of rigorous analysis *Complex Analysis* will be welcomed by students of mathematics physics engineering and other sciences The Princeton Lectures in Analysis represents a sustained effort to introduce the core areas of mathematical analysis while also illustrating the organic unity between them Numerous examples and applications throughout its four planned volumes of which *Complex Analysis* is the second highlight the far reaching consequences of certain ideas in analysis to other fields of mathematics and a variety of sciences Stein and Shakarchi move from an introduction addressing Fourier series and integrals to in depth considerations of complex analysis measure and integration theory and Hilbert spaces and finally further topics such as functional analysis distributions and elements of probability theory **Orthogonal Polynomials on the Unit Circle: Spectral theory** Barry Simon,2005 This two part book is a comprehensive overview of the theory of probability measures on the unit circle viewed especially in terms of the orthogonal polynomials defined by those measures A major theme involves the connections between the Verblunsky coefficients the coefficients of the recurrence equation for the orthogonal polynomials and the measures an analog of the spectral theory of one dimensional Schrödinger operators Among the topics discussed along the way are the asymptotics of Toeplitz determinants Szegő's theorems limit theorems for the density of the zeros of orthogonal polynomials matrix representations for multiplication by z CMV matrices periodic Verblunsky coefficients from the point of view of meromorphic

functions on hyperelliptic surfaces and connections between the theories of orthogonal polynomials on the unit circle and on the real line *Iterative Methods and Preconditioners for Systems of Linear Equations* Gabriele Ciaramella, Martin J. Gander, 2022-02-08 Iterative methods use successive approximations to obtain more accurate solutions This book gives an introduction to iterative methods and preconditioning for solving discretized elliptic partial differential equations and optimal control problems governed by the Laplace equation for which the use of matrix free procedures is crucial All methods are explained and analyzed starting from the historical ideas of the inventors which are often quoted from their seminal works Iterative Methods and Preconditioners for Systems of Linear Equations grew out of a set of lecture notes that were improved and enriched over time resulting in a clear focus for the teaching methodology which derives complete convergence estimates for all methods illustrates and provides MATLAB codes for all methods and studies and tests all preconditioners first as stationary iterative solvers This textbook is appropriate for undergraduate and graduate students who want an overview or deeper understanding of iterative methods Its focus on both analysis and numerical experiments allows the material to be taught with very little preparation since all the arguments are self contained and makes it appropriate for self study as well It can be used in courses on iterative methods Krylov methods and preconditioners and numerical optimal control Scientists and engineers interested in new topics and applications will also find the text useful
