

## Buried Treasure Project<sup>4</sup>

A group of adventurers were scuba diving in Bermuda, when they discovered a treasure map in a small airtight container on a sunken ship in the ocean. The map directed them to a particular area of Bermuda and included the following directions:

*Locate the tallest palm tree in the area and look for the highest hill (north of the palm tree). Draw a line from the palm tree to base of the hill. From the palm tree, turn  $40^\circ$  clockwise from that line and walk 70 yards (paces) to the big red rock. From the red rock, walk 50 yards (paces) back to the line between the palm tree and base of the hill. Dig there for the buried treasure!*

*The following diagram illustrates the situation detailed in the treasure map<sup>5</sup>:*

1. Draw a triangle to illustrate the situation detailed above. [Hint: use the diagram above]. What characteristics of the triangle are known? Which case of the Law of Sines is represented? (2 points)
2. Solve the triangle drawn in question 1. If there is more than one solution, **choose one**. Indicate all sides and angles of the triangle. What is the distance from the palm tree to the treasure? (Assume that 1 pace = 1 yard). [Note: First do the calculations by hand and then use the coding commands from the previous page to find the answers. Include your hand calculations as well as a screenshot of your code and output]. (4 points)
3. Suppose that the location indicated in question 2 did not yield any treasure. Find the other solution to the triangle and indicate the distance from the palm tree to the treasure. [Note: First do the calculations by hand and then use the coding commands from the previous page to find the answers. Include your hand calculations as well as a screenshot of your code and output]. (4 points)
