Gideon Nieman, Marius Pretorius

Business Management A Value Chain 2nd Edition:

Business Management Gideon Nieman, 2006 *Business Management* Hannie Badenhorst-Weiss, Tersia Brevis, Mike Cant, 2008-02 The world is in a constant state of flux and this influences the operations of every business and organisation Business Management A Contemporary Approach deals with these changes by covering the functions of a business or an organisation and then addressing the contemporary issues that affect them These issues include globalisation corporate entrepreneurship and citizenship credit diversity and HIV AIDS Every student of business and business manager needs to understand the importance of these issues and their influence on the operations of a business Business Management A Contemporary Approach also highlights the interdependency between the various business functions This interdependency is very important for a business or organisation to operate as a whole **Managing Growth** Gideon Nieman, Marius Pretorius, 2004 The problems inherent in the business venture life cycle are discussed theoretically and applied to case studies in this business guide for entrepreneurs and small business owners on growth and management strategies for business start ups **Industries without Smokestacks** Richard Newfarmer, John Page, Finn Tarp, 2018-10-25 By 2030 more than three quarters of the world's absolute poor are projected to live in Africa Accelerating economic growth is key to rising incomes on the continent and central to this challenge is establishing activities that are capable of employing large numbers of unskilled workers that can raise productivity through innovation and that can power growth through exports Such structural transformation is a key driver of growth and between 1950-1996 about half of the economic catch up by developing countries led by East Asia was due to rising productivity in manufacturing combined with growing agricultural output Africa however has lagged behind In 2014 the average share of manufacturing in GDP in sub-Saharan Africa hovered around 10 per cent unchanged from the 1970s leading some observers to be pessimistic about Africa's potential to catch the wave of sustained rapid growth and rising incomes Industries Without Smokestacks Industrialization in Africa Reconsidered challenges this view It argues that other activities sharing the characteristics of manufacturing including tourism ICT and other services as well as food processing and horticulture are beginning to play a role analogous to that played by manufacturing in East Asia This reflects not only changes in the global organization of industries since the early era of rapid East Asian growth but also advantages unique to Africa These industries without smokestacks offer new opportunities for Africa to grow in coming decades Value Creation and Opportunity Management in Africa's Leather Sector Mwinyihija, 2018-08-31 The scope of the study reported in this book entails understanding the constraints and providing potential diagnostics to Africa's leather sector which is otherwise globally one of the most lucrative agro-based industries in the world estimated at over US 130 Billion One of the principle core thematic aspects of the leather sector is characteristically its long value chain with multiple socio-economic dimensions These entail employability creation of wealth gender parity and rural development Thusly in an effort to stimulate scholarly discussion the study argues that preemptively

the problems facing the leather value chain stratum are high losses low value addition initiatives and unexplored opportunities that are synonymous with the Africa's leather industry. Indeed, the results of the research conceptualized opportunity management as a critical panacea towards value addition strategy for the leather sector in developing countries. In dealing with this concept, the book evaluated the various value chains phases and identified nine specific issues and variables drawn between value addition and the main leather strata. With this background, the study posed a main question and four sub-questions to closely expound on related hypotheses and in lieu pursue four thematic aspects: trade, productivity, competitiveness, and innovation, covered in twelve chapters of the book. Conclusively, the book manages to successfully conceptualize as a novelty that opportunity management is integral towards developing a leather value addition strategy for the developing countries with particular emphasis to Africa.

Local Clusters in Global Value Chains Valentina De Marchi, Eleonora Di Maria, Gary Gereffi, 2017-07-28. The international fragmentation of economic activities from research and design to production and marketing described through the lens of the global value chain (GVC) approach impacts the structure and performance of small and medium-sized enterprises (SMEs) agglomerated in economic clusters. The consolidation of GVCs ruled by global lead firms and the recession of 2008-09 exacerbated the pressures on cluster actors that based their competitive advantage on local systems, spurring an increasing heterogeneity both across and within clusters that is still overlooked in the literature. Drawing on detailed studies of different industries and countries, *Local Clusters in Global Value Chains* shows the co-evolutionary trajectories of clusters and GVCs and the role of firms and their strategies in organizing manufacturing and innovation activities in the context of ongoing technological shifts. The book explores the tension between place-based variables and global drivers of change and the possibility for territories containing such clusters to prosper in the new global scenario. By adopting insights from the GVC framework and management studies, the book discusses how the internationalization strategies of firms create opportunities as well as constraints for adaptive upgrading in clusters. This book is of interest to both researchers and policy makers who are interested in the dynamic sources of competitive advantage in the global economy.

The logistics context* Vadims Kolmogorovs,2006-10-28 Bachelor Thesis from the year 2006 in the subject Business economics Supply Production Logistics grade 2 University of Applied Sciences Osnabr ck language English abstract Supply Chain Management SCM is a management concept aimed at organising and optimising the complete value chain from sourcing raw materials to the final customer regardless of organisational boundaries In recent years the strategy of concentrating on core competencies of companies led to a vertical disintegration of processes along the value chain Practical experience shows that companies focusing on their core competencies in first turn outsource logistics operations within their supply chain management to external service providers Outsourcing is defined as the practice of buying goods and services from outside suppliers rather than producing them within a firm Harvard Business Review HBR the popular management journal recently listed outsourcing as one of the most influential concepts coined in the last 75 years A fundamental question to ask in this work is whether outsourcing is really value enhancing and in particular whether the firm that undertakes outsourcing becomes more efficient as a result In the context of this work the degree of efficiency will be addressed by analysing the input side as labour costs and capital for initial investments It will be shown that in an attempt to increase efficiency by reducing expenses and turning fixed costs into variable costs companies pursue restructuring procedures that include outsourcing of non core activities to specialists having a lower cost base due to better economies of scale and scope In addition efficiency may also be improved because adjusting output to variations in demand and maintaining the quality of inputs may be easier via enforcing contracts with outside suppliers than in dealing with a strongly unionized internal workforce *Forthcoming Books* Rose Arny,2004 **E-supply Chain Technologies and Management** Qingyu Zhang,2007 E supply chain is the use of information technology electronic means or cyberspace to bring together widely dispersed suppliers and buyers to enhance coordination and knowledge sharing and to manage upstream and downstream value chain channels E Supply Chain Technologies and Management offers the most comprehensive analysis of the concepts models and IT infrastructures of electronic supply chains This Premier Reference Source provides a broad understanding of issues pertaining to the use of emerging information technologies and their impact on supply chain flexibility and management Professionals researchers and practitioners who want to explore the concepts and principles of e supply chain
