INCOBAT Eric Armengaud,Riccardo Groppo,Sven Rzepka,2022-09-01 Electro mobility is considered as a key technology to achieve green mobility and fulfil tomorrow s emission standards However different challenges still need to be faced to achieve comparable performances to conventional vehicles and finally obtain market acceptance Two of these challenges are vehicle range and production costs In that context the aim of INCOBAT October 2013 December 2016 was to provide innovative and cost efficient battery management systems for next generation HV batteries INCOBAT proposes a platform concept that achieves cost reduction reduced complexity increased reliability and flexibility while at the same time reaching higher energy efficiency Very tight control of the cell function leading to a significant increase of the driving range of the FEV Radical cost reduction of the battery management system with respect to current solutions Development of modular concepts for system architecture and partitioning safety security reliability as well as verification and validation thus enabling efficient integration into different vehicle platforms The INCOBAT project focused on the following twelve technical innovations grouped into four innovation groups which are summarized in this book Customer needs and integration aspects Transversal innovation Technology innovation Transversal innovation **ESD Technology** ,1995 **Advances in Automotive Control 2001** U. Kiencke,G. L. Gissinger,2001 This Proceedings contains the papers presented at the Third IFAC Workshop on ADVANCES IN AUTOMOTIVE CONTROL held in Karlsruhe Germany on 28 30 March 2001 As the subject indicates the aim of this workshop was to discuss not only the latest advances related to motor vehicles but also and more generally to exchange ideas between academic partners car manufacturers and subcontractors The plenary lectures are of great importance and the thematic sessions in the different sections are the essence of such workshops However the discussions between experts in the different fields the meetings between people from industry universities and public or

private laboratories as well as the resulting exchange of ideas are as important Research is often criticized for providing merely theoretical results and for the insufficient number of its applications The motor vehicle industry offers a wide field of applications in which we can validate all techniques tools and methods This allows us to be involved in all the areas of fundamental research in all the different possible approaches from fundamental research to technology transfer and to observe the actual effects of our results The increase in road traffic was a major problem of the last century It is clear that one of the challenges of the XXIst century will be to improve driving safety and comfort The sessions in the Proceedings volume are divided as follows Driveline control Driveline modelling Vehicle dynamics I and II Electronic architecture Intelligent components Engine control I and II Engine modelling Modelling of combustion and turbo charging Diagnostics and Subsystems The quality of the papers and the diversity of their origins clearly show the interest taken in this key sector of our research and industry
