Introduction To Sustainable Infrastructure Engineering Design:

Introduction to Sustainable Infrastructure Engineering Design Edward S. Neumann, 2016 Civil engineering is a profession that has a distinct focus on the design of infrastructure systems There are major differences between the characteristics of the infrastructure design problems that civil engineers solve and the problems examined by other engineering disciplines which tend to emphasize the design of smaller items produced for short term use Beginning students in civil engineering should be made aware of these distinctions and the types of systems civil engineers design so that they can begin to think about the problems associated with them This is the starting point for evolving into professional civil engineers whose area of expertise is design of the civil works infrastructure that supports modern societies

This book presents 09 keynote and invited lectures and 177 technical papers from the 4th International Conference on Geotechnics for Sustainable Infrastructure Development held on 28 29 Nov 2019 in Hanoi Vietnam The papers come from 35 countries of the five different continents and are grouped in six conference themes 1 Deep Foundations 2 Tunnelling and Underground Spaces 3 Ground Improvement 4 Landslide and Erosion 5 Geotechnical Modelling and Monitoring and 6 Coastal Foundation Engineering The keynote lectures are devoted by Prof Harry Poulos Australia Prof Adam Bezuijen Belgium Prof Delwyn Fredlund Canada Prof Lidija Zdravkovic UK Prof Masaki Kitazume Japan and Prof Mark Randolph Australia Four invited lectures are given by Prof Charles Ng ISSMGE President Prof Eun Chul Shin ISSMGE Vice President for Asia Prof Norikazu Shimizu Japan and Dr Kenji Mori Japan A Review of Multicriteria Assessment Techniques Applied to Sustainable Infrastructure Design Ignacio J. Navarro, Victor Yepes, Jose V. Mart, Given the great impacts associated with the construction and maintenance of infrastructures in both the environmental the economic and the social dimensions a sustainable approach to their design appears essential to ease the fulfilment of the Sustainable Development Goals set by the United Nations Multicriteria decision making methods are usually applied to address the complex and often conflicting criteria that characterise sustainability e present study aims to review the current state of the art regarding the application of such techniques in the sustainability assessment of infrastructures analysing as well the sustainability impacts and criteria included in the assessments Analytic Hierarchy Process is the most frequently used weighting technique Simple Additive Weighting has turned out to be the most applied decision making method to assess the weighted criteria Although a life cycle assessment approach is recurrently used to evaluate sustainability standardised concepts such as cost discounting or presentation of the assumed functional unit or system boundaries as required by ISO 14040 are still only marginally used Additionally a need for further research in the inclusion of fuzziness in the handling of linguistic variables is identified
