Introductory Plant Biology Kingsley R. Stern, Gordon Uno, 2006
Many of the silky haired seeds being released from the splitting pod of a milkweed shown on the cover were presumably blown away and eventually germinated probably in a grassy area. There are about 120 species of milkweed, *Asclepias*, all known for the milky latex they produce and for being host plants to the caterpillars of monarch butterflies. Other insects, birds, and animals tend to shun milkweeds because the latex is bitter, but Native Americans used infusions of roots for at least 1,000 years to treat respiratory ailments and fevers. In the past, similar root infusions were also widely used in American medicine as an expectorant and to treat cancers. The flowers, as shown in the Chapter 23 opener, are elegant.

This laboratory manual assumes no previous knowledge of the biological sciences on the part of the student. It is designed for use in a one semester or one quarter introductory course in plant biology and shorter introductory botany courses open to both nonmajors and majors. Both the principles of biology and the scientific method are introduced using plants as illustrations. The exercises demonstrate the underlying unity of all living organisms at the cellular level. The manual is designed so that students can work more or less independently. Instructors are free to require different drawings or other assignments and may also omit some of those suggested within each exercise. Students are encouraged to read the laboratory exercise before coming to class. Laboratory preparation quizzes are provided at the end of each exercise. Answers to the laboratory preparation quizzes are discernible within the particular exercises and

should not require checking other sources Each exercise includes suggested learning goals and exercise review questions
