ENGINE WITH 6 CYLINDERS

The NEF engines have been specifically designed by Iveco Motors for the power generation application.

They are internal combustion engines, with a 4-stroke Diesel cycle, 4 or 6 cylinders and 2 valves per cylinder.

They are fueled by a rotary mechanical pump.

Data, technical specifications and performances granted shall be valid only if the Setter will follow and comply with all installation prescriptions provided by Iveco Motors.

Furthermore, the expanders assembled by the Setter must always comply with couple, power and number of revolutions based on which the engine has been designed.

The section herein described is composed of four directories:

- directory of mechanical overhaul prescribed in accordance to the engine's specific duty, illustrating all necessary operations to remove and assembly the external components of the engine, including cylinder heads, gearbox of the timing system and of the front part cover;
- electrical directory, describing the connections of the different components, of the pre-post heating gearbox (only for some versions) and of the sensors assembled to the engine;
- troubleshooting directory;
- directory of preventive and regular maintenance operations, providing instructions for the execution of the main operations.
