Student Exploration: Heat Transfer by Conduction

Directions: Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

Vocabulary: conduction, convection, insulate, radiation, thermal conductor, thermal energy, thermal insulator

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

Suppose two frying pans have been left on the stove with the burners on. One of the frying pans has a metal handle and the other has a wooden handle.

1. Which handle do you think you could safely touch?

The wooden handle.

2. Why do you think one handle will be cooler than the other?

Because wood conducts less heat than metal.

Gizmo Warm-up

Heat, also called **thermal energy**, can be transmitted through space (**radiation**), by moving fluids (**convection**), or through direct contact. This final method, called **conduction**, is explored in the *Heat Transfer by Conduction* Gizmo.

To begin, check that **Aluminum** is selected. Select the **BAR CHART** tab and turn on **Show numerical values**.

1. What is the initial temperature of each beaker? **Beaker A**

95°

Beaker B

5°

2. Click **Play** (▶) and observe.

A. What happens to the temperature of **Beaker A** over time?

The temperature decreases overtime then ends at 50°.

B. What happens to the temperature of **Beaker B** over time?

The temperature increases overtime then ends at 50°.

3. Why do you think the temperatures of **Beaker A** and **Beaker B** changed as they did?

The aluminum is conducting the heat from the warmer beaker to the cooler one until they are at the same temperature.

Student Study Guide to accompany Introduction to Heat, 4th Edition and Fundamentals of Heat, 5th Edition Frank P. Incropera, David P. DeWitt, 2004-12-17 Work more effectively and gauge your progress as you go along This Student Study Guide and Solutions Manual has been developed by the publisher as a supplement to accompany Incropera's Fundamentals of Heat Mass Transfer 5th Edition and Introduction to Heat Mass Transfer 4th Edition It contains a summary of key concepts from each chapter fully worked solutions to representative problems from the text and in many cases includes exploration of a solution over a range of values using the software package Interactive Heat Transfer v2.0 This supplement is intended to help students focus on the key concepts from the text verify their solutions by comparing them to the authors own worked solutions and use computer tools to explore the behavior of the systems in question Each worked solution follows the structured problem solving approach from the text Comments throughout the solution help in explaining the thought process and a Comments section at the end of each solution discusses reasonableness and or implications of the answer Introduction to Heat Transfer 4th Edition the de facto standard text for heat transfer is noted for its readability comprehensiveness and relevancy Now revised to include clarified learning objectives chapter summaries and many new problems The fourth edition like previous editions continues to support four student learning objectives desired attributes of any first course in heat transfer 1 Learn the meaning of the terminology and physical principles of heat transfer delineate pertinent transport phenomena for any process or system involving heat transfer 2 Use requisite inputs for computing heat transfer rates and or material temperatures 3 Develop representative models of real processes and systems 4 Draw conclusions concerning process systems design or performance from the attendant analysis As a best selling book in the field Fundamentals of Heat Mass Transfer 5th Edition provides a complete introduction to the physical origins of heat and mass transfer Noted for its

crystal clear presentation and easy to follow problem solving methodology Incropera and Dewitt's systematic approach to the first law develops reader confidence in using this essential tool for thermal analysis

Convection and Conduction Heat Transfer Nicolaos Sabella, 2016-04 All matter is made up of molecules and atoms. These atoms are always in different types of motion: translation, rotational, vibrational. The motion of atoms and molecules creates heat or thermal energy. All matter has this thermal energy. The more motion the atoms or molecules have, the more heat or thermal energy they will have. Heat transfer is the exchange of thermal energy between physical systems. The rate of heat transfer is dependent on the temperatures of the systems and the properties of the intervening medium through which the heat is transferred. The three fundamental modes of heat transfer are conduction, convection, and radiation. Heat transfer is the flow of energy in the form of heat is a process by which a system changes its internal energy, hence is of vital use in applications of the First Law of Thermodynamics. Conduction is also known as diffusion, not to be confused with diffusion related to the mixing of constituents of a fluid. Heat energy transferred between a surface and a moving fluid at different temperatures is known as convection. In reality, this is a combination of diffusion and bulk motion of molecules. Near the surface, the fluid velocity is low, and diffusion dominates. Away from the surface, bulk motion increases, the influence dominates, and natural convection is caused by buoyancy forces due to density differences caused by temperature variations in the fluid. At heating, the density change in the boundary layer will cause the fluid to rise and be replaced by cooler fluid that also will heat and rise. This continuous phenomenon is called free or natural convection. Conduction as heat transfer takes place if there is a temperature gradient in a solid or stationary fluid medium. With conduction, energy transfers from more energetic to less energetic molecules when neighboring molecules collide. Heat flows in the direction of decreasing temperatures since higher temperatures are associated with higher molecular energy. This book emphasizes the principles of convection and conduction heat transfer.

Undergraduate Lectures on Heat Transfer S. Paolucci, 2019-07-02 The present book covers essential material in heat transfer. It is aimed at students who desire a fundamental understanding of the subject and provides them with the ability of solving engineering problems related to heat transfer. Part I, consisting of Lectures 1 and 2, provides a brief overview of the three modes of heat transfer: conduction, convection, and radiation. Dimensions and units of various quantities, the fundamental laws, and the role that energy balance plays in addressing heat transfer problems are also covered in these lectures. Part II, consisting of Lectures 3 through 11, deals with conduction heat transfer. Steady and unsteady one and multi-dimensional heat conduction are covered, as well as the concept of thermal resistances, heat sources, and fins. Part III consists of Lectures 12 through 25 and deals with convection heat transfer. Basic concepts such as the boundary layer approximation, non-dimensionalization, and similarity, as well as topics on laminar and turbulent internal and external flows in forced and free convection, are covered. Part IV, consisting of Lectures 26 through 31, deals with the subject of thermal radiation, including the physics and geometry of radiation, blackbody radiation, solar radiation, and radiation exchange.

Offering a concise overview of the most critical concepts of heat transfer the volume is ideal for those new to the field or requiring a refresher
