What is visual literacy?

Visual communication is a process of sending and receiving messages using images. **Visual literacy** can be defined as the "ability to construct meaning from visual images" (Giorgis, Johnson, Bonomo, Colbert, & al, 1999: 146). To make meaning from images, the 'reader' uses the critical skills of exploration, critique and reflection. Lapp et al (1999) use the term "intermediality" to describe the combined literacies needed to read in a multi-media world. They stress the importance of active reading based on information visualisation and the importance of visual communication to capture attention, reinforce knowledge and increase audience responses. **Visual literacy is about interpreting images of the present and past and producing images that effectively communicate the message to an audience.**

The term "visual literacy" was first used by the writer John Debes in 1968 (1968). Messaris (1995) defines visual literacy as the gaining of knowledge and experience about the workings of the visual media coupled with a heightened conscious awareness of those workings. Visual literacy includes the group of skills which enable an individual "to understand and use visuals for intentionally communicating with others" (Ausburn & Ausburn, 1978: 291). Visual literacy is what is seen with the eye and what is 'seen' with the mind. A visually literate person should be able to read and write visual language. This includes the ability to successfully decode and interpret visual messages and to encode and compose meaningful visual communications.

Visual literacy involves developing the set of skills needed to be able to interpret the content of visual images, examine social impact of those images and to discuss purpose, audience and ownership. It includes the ability to visualise internally, communicate visually and read and interpret visual images. In addition, students need to be aware of the manipulative uses and ideological implications of images. Visual literacy also involves **making judgements** of the accuracy, validity and worth of images. A visually literate person is able to discriminate and make sense of visual objects and images; create visuals; comprehend and appreciate the visuals created by others; and visualise objects in their mind's eye. To be an effective communicator in today's world, a person needs to be able to interpret, create and select images to convey a range of meanings.

There are many forms of visual communication including gestures, objects, signs and symbols. Visual sign systems are everywhere. For example, dance, film, fashion, hairstyles, exhibitions, public monuments, interior design, lighting, computer games, advertising, photography, architecture and art are just some examples of visual communication. To be visually literate a person should be able to:

- analyse and interpret images to gain meaning within the cultural context the image was created and exists;
- analyse the syntax of images including style and composition;
- analyse the techniques used to produce the image;
- evaluate the aesthetic merit of the work;
- evaluate the merit of the work in terms of purpose and audience; and
- grasp the synergy, interaction, innovation, affective impact and/or 'feel' of an image

Visual Informatics: Bridging Research and Practice Halimah Badioze Zaman, Peter Robinson, Maria Petrou, Patrick Olivier, Heiko Schröder, 2009-11-14

Visual informatics is a field of interest not just among the information technology and computer science community, but also other related fields such as engineering, medical and health informatics, and education, starting in the early 1990s. Recently, the field is gaining more attention from researchers and industry. It has become a multidisciplinary and transdisciplinary field related to research areas such as computer vision, visualization, information visualization, real-time image processing, medical image processing, image information retrieval, virtual reality, augmented reality, pervasive visual mathematics, 3D graphics, multimedia fusion, visual data mining, visual ontology, as well as services and visual culture. Various efforts have been vested in different research, but operationally many of these systems are not prominent in the mass market, and thus knowledge and research on these phenomena within the mentioned areas need to be shared and disseminated. It is for this reason that the Visual Informatics Research Group from Universiti Bangsaan Malaysia (UKM) decided to spearhead this initiative to bring together experts in this very diversified but important research area so that more concerted efforts can

be undertaken not just within the visual informatics community in Malaysia but from other parts of the world namely Asia Europe Oceania and USA This first International Visual Informatics Conference IVIC 2009 was conducted collaboratively by the visual informatics research community from the various public and private institutions of higher learning in Malaysia and hosted by UKM
