André Joyal, Ieke Moerdijk

Theory Of Computer Science By S S Sane:

Number Theory Sinnou David,1996-11-07 The contributions in this book are based on the lectures delivered at the Seminaire de theorie des nombres de Paris during the academic year 93 94 It is the fifteenth annual volume This book covers the whole spectrum of number theory and is composed of contributions from some of the best specialists worldwide Together they constitute the latest developments in number theory that will be an invaluable resource for all workers in that area

Algebraic Set Theory André Joyal,Ieke Moerdijk,1995-09-14 This book offers a new algebraic approach to set theory The authors introduce a particular kind of algebra the Zermelo Fraenkel algebras which arise from the familiar axioms of Zermelo Fraenkel set theory Furthermore the authors explicitly construct these algebras using the theory of bisimulations Their approach is completely constructive and contains both intuitionistic set theory and topos theory In particular it provides a uniform description of various constructions of the cumulative hierarchy of sets in forcing models sheaf models and realizability models Graduate students and researchers in mathematical logic category theory and computer science should find this book of great interest and it should be accessible to anyone with a background in categorical logic

Combinatorial and Geometric Group Theory, Edinburgh 1993 Andrew J. Duncan,N. D. Gilbert,James Howie,1995 The ICMS Workshop on Geometric and Combinatorial Methods in Group Theory held at Heriot Watt University in 1993 brought together some of the leading research workers in the subject Some of the survey articles and contributed papers presented at the meeting are collected in this volume The former cover a number of areas of current interest and include papers by S M Gersten R I Grigorchuk P H Kropholler A Lubotzky A A Razborov and E Zelmanov The contributed articles all refereed range over a wide number of topics in combinatorial and geometric group theory and related topics The volume represents a summary of the state of knowledge of the field and as such will be indispensable to all research workers in the area

Handbook of Tilting Theory Lidia Angeleri Hügel,Dieter Happel,Henning Krause,2007-01-04 A handbook of key articles providing both an introduction and reference for newcomers and experts alike Ergodic Theory and Its Connection with Harmonic Analysis Karl Endel Petersen,1995 Tutorial survey papers on important areas of ergodic theory with related research papers The Descriptive Set Theory of Polish Group Actions Howard Becker,A. S. Kechris,1996-12-05 In this book the authors present their research into the foundations of the theory of Polish groups and the associated orbit equivalence relations The particular case of locally compact groups has long been studied in many areas of mathematics Non locally compact Polish groups occur naturally as groups of symmetries in such areas as logic especially model theory ergodic theory group representations and operator algebras Some of the topics covered here are topological realizations of Borel measurable actions universal actions applications to invariant measures actions of the infinite symmetric group in connection with model theory logic actions dichotomies for orbit spaces including Silver Glimm Effros type dichotomies and the topological Vaught conjecture descriptive complexity of orbit equivalence relations definable cardinality of orbit spaces

Semigroup Theory and Its Applications Alfred H. Clifford, 1996-05-16 This volume contains survey papers by the invited speakers at the Conference on Semigroup Theory and Its Applications which took place at Tulane University in April 1994. The authors represent the leading areas of research in semigroup theory and its applications both to other areas of mathematics and to areas outside mathematics. Included are papers by Gordon Preston surveying Clifford's work on Clifford semigroups and by John Rhodes tracing the influence of Clifford's work on current semigroup theory. Notable among the areas of application are the paper by Jean-Eric Pin on applications of other areas of mathematics to semigroup theory and the paper by the editors on an application of semigroup theory to theoretical computer science and mathematical logic. All workers in semigroup theory will find this volume invaluable.

Ergodic Theory and Zd Actions Mark Pollicott, Klaus Schmidt, 1996-03-28 A mixture of surveys and original articles that span the theory of Zd actions.

Recent Perspectives in Random Matrix Theory and Number Theory F. Mezzadri, N. C. Snaith, 2005-06-21 Provides a grounding in random matrix techniques applied to analytic number theory.
