The Complete Book on Biodegradable Plastics and Polymers (Recent Developments, Properties, Analysis, Materials & Processes) NIIR Board of Consultants & Engineers, 2006-10-01 Biodegradable plastics made with plant based materials have been available for many years The term biodegradable means that a substance is able to be broken down into simpler substances by the activities of living organisms and therefore is unlikely to persist in the environment There are many different standards used to measure biodegradability with each country having its own The requirements range from 90 per cent to 60 per cent decomposition of the product within 60 to 180 days of being placed in a standard composting environment They may be composed of either bio plastics which are plastics whose components are derived from renewable raw materials or petroleum based plastics which contain additives Biodegradability of plastics is dependent on the chemical structure of the material and on constitution of the final product not just on the raw materials used for its production Polyesters play a predominant role as biodegradable plastics due to their potentially hydrolysable ester bonds Bio based polymers are divided into three categories based on their origin and production polymer directly extracted from biomass polymers produced by classical chemical synthesis using renewable biomass monomer and polymers produces by microorganisms or genetically modified bacteria In response to public concern about the effects of plastics on the environment and in particular the damaging effects of sea litter on animals and birds legislation is being enacted or is pending in many countries to ban non degradable packing finishing nets etc This book basically deals with biodegradable plastics developments and environmental impacts hydro biodegradable and photo biodegradable starch synthetic aliphatic polyester blends difference between standards for biodegradation polybutylene succinate pbs and polybutylene recent developments in the biopolymer industry recent advances in synthesis of biopolymers by traditional methodologies polymers environmentally degradable synthetic biodegradable polymers as medical devices polymers produced from classical chemical synthesis from bio based monomers potential bio based packaging materials conventional packaging materials environmental impact of bio based materials biodegradability and compostability etc Environmentally acceptable degradable polymers have been defined as polymers that degrade in the environment by several mechanisms and culminate in complete biodegradation so that no residue remains in the environment The present book gives thorough information to biodegradable plastic and polymers This is an excellent book for scientists engineers students and industrial researchers in the field of bio based materials TAGS Bioplastics and Biodegradable Plastics Biodegradable Plastics and Polymers Biodegradable Products Biodegradable Plastics from Waste How to Make Biodegradable Plastic Biodegradable Plastic Bags Biodegradable Plastic Bottles Biodegradable Plastic Manufacture Producing Biodegradable Plastic Starch Based Biodegradable Plastics

Griffin, 2012-10-04 Since the early 1970s the subject of biodegradable plastics has acquired a rapidly growing literature of academic research papers It has also acquired a formidable volume of patent documentation and all this has been overwhelmed by an astonishing quantity of serious media and political comment A new entrant into any technical arena would in most technologies simply visit their technical library and pick up a text book on the subject in the expectation of absorbing the basic facts before launching into the daily task of updating and evaluating Scientific conferences have produced many substantial volumes carrying the word biodegradable on their covers and there has even been a specialist monograph on the topic of bacterially produced polymers but surprisingly no book has yet emerged providing a general survey of the subject Having devoted half my professional career to the subject of biodegradable plastics I agreed to take on the editorial job of producing such a book when asked by the publisher I knew that the task of finding expert specialists and persuading them to contribute dispassionate accounts of their specialisms would not be easy but the difficulties that I have encountered were far greater than I expected Some were simply too busy others were involved in patent disputes or commercial negotiations In giving an account of the work that I and my students carried out at Brunel University I believe that I have written in a manner that displays enthusiasm without prejudice *Degradable Polymers* G. Scott, D. Gilead, 2012-12-06 Few scientific developments in recent years have captured the popular imagination like the subject of biodegradable plastics The reasons for this are complex and lie deep in the human subconscious Discarded plastics are an intrusion on the sea shore and in the countryside The fact that nature's litter abounds in the sea and on land is acceptable because it is biodegradable even though it may take many years to be bioassimilated into the ecosystem Plastics litter is not seen to be biodegradable and is aesthetically unacceptable because it does not blend into the natural environment To the environmentally aware but often scientifically naive biodegradation is seen to be the ecologically acceptable solution to the problem of plastic packaging waste and litter and some packaging manufacturers have exploited the green consumer with exaggerated claims to environmentally friendly biodegradable packaging materials The principles underlying environmental degradation are not understood even by some manufacturers of biodegradable materials and the claims made for them have been categorized as deceptive by USA legislative authorities This has set back the acceptance of plastics with controlled biodegradability as part of the overall waste and litter control strategy At the opposite end of the commercial spectrum the

polymer manufacturing industries through their trade associations have been at pains to discount the role of degradable materials in waste and litter management This negative campaign has concentrated on the supposed incompatibility of degradable plastics with aspects of waste management strategy notably materials recycling Biodegradable Polymers Gary P. Felton,2011 Biodegradable Polymers and Plastics Emo Chiellini,Roberto Solaro,2003-10-31 Synthetic and semi synthetic polymeric materials were originally developed for their durability and resistance to allforms of degradation including biodegradation Special performance characteristics are achieved in items derived therefrom through the control and maintenance of their molocular weight and functionality during the processing and under service conditions Polymeric materials were and are currently widely accepted because of their ease of processability and amenability to provide a large variety of cost effective items that help enhancing the comfort and quality of life in the modern industrial society
