**FPGA Design** Philip Simpson,2010-07-23 In August of 2006 an engineering VP from one of Altera s customers approached Misha Burich VP of Engineering at Altera asking for help in reliably being able to predict the cost schedule and quality of system designs reliant on FPGA designs At this time I was responsible for defining the design flow requirements for the Altera design software and was tasked with investigating this further As I worked with the customer to understand what worked and what did not work reliably in their FPGA design process I noted that this problem was not unique to this one customer The characteristics of the problem are shared by many Corporations that implement designs in FPGAs The Corporation has many design teams at different locations and the success of the FPGA projects vary between the teams There is a wide range of design experience across the teams There is no working process for sharing design blocks between engineering teams As I analyzed the data that I had received from hundreds of customer visits in the past I noticed that design reuse among engineering teams was a challenge I also noticed that many of the design teams at the same Companies and even within the same design team used different design methodologies Altera had recently solved this problem as part of its own FPGA design software and IP development process
