**Induction Accelerators** Ken Takayama, Richard J. Briggs, 2010-10-05 A broad class of accelerators rests on the induction principle whereby the accelerating electrical fields are generated by time varying magnetic fluxes Particularly suitable for the transport of bright and high intensity beams of electrons protons or heavy ions in any geometry linear or circular the research and development of induction accelerators is a thriving subfield of accelerator physics This text is the first comprehensive account of both the fundamentals and the state of the art about the modern conceptual design and implementation of such devices Accordingly the first part of the book is devoted to the essential features of and key technologies used for induction accelerators at a level suitable for postgraduate students and newcomers to the field Subsequent chapters deal with more specialized and advanced topics *Novel ideas for accelerators, particle detection and data challenges at future colliders* Alessandro Tricoli, Patrizia Azzi, Petra Merkel, Vladimir Shiltsev, 2023-07-21 [Neutron Scattering - Fundamentals](#) Francisco J. Bermejo, Fernando Sordo, 2013-11-22 This chapter reviews the most significant developments that have taken place in the design construction and operation of new neutron sources as well as the refurbishment programs of others already serving the neutron scattering community Such advances in neutron production devices are to be considered in conjunction with impressive achievements in the optimization of neutron delivery systems as well as in neutron instrumentation which overall resulted in a truly remarkable improvement in neutron count rates As a result the capabilities of experimental neutron sources are nowadays larger than ever before despite there being fewer sources available It is also worth remarking the coming into line of compact accelerator driven neutron sources as well as work carried out at small research reactors which as exemplified during the past decade have played an important role in helping the large user based facilities to carry out development work geared toward the achievement of full performance
