The Handbook of Brain Theory and

Neural Networks Michael A. Arbib, 2003 This second edition presents the enormous progress made in recent years in the many subfields related to the two great questions how does the brain work and How can we build intelligent machines This second edition greatly increases the coverage of models of fundamental neurobiology cognitive neuroscience and neural network approaches to language Midwest *Geophysical Applications of Artificial Neural Networks and Fuzzy Logic* W. Sandham, M. Leggett, 2013-06-29 The past fifteen years has witnessed an explosive growth in the fundamental research and applications of artificial neural networks ANNs and fuzzy logic FL The main impetus behind this growth has been the ability of such methods to offer solutions not amenable to conventional techniques particularly in application domains involving pattern recognition prediction and control Although the origins of ANNs and FL may be traced back to the 1940s and 1960s respectively the most rapid progress has only been achieved in the last fifteen years This has been due to significant theoretical advances in our understanding of ANNs and FL complemented by major technological developments in high speed computing In geophysics ANNs and FL have enjoyed significant success and are now employed routinely in the following areas amongst others 1 Exploration Seismology a Seismic data processing trace editing first break picking deconvolution and multiple suppression wavelet estimation velocity analysis noise identification reduction statics analysis dataset matching prediction attenuation b AVO analysis c Chimneys d Compression I dimensionality reduction e Shear wave analysis f Interpretation event tracking lithology prediction and well log analysis prospect appraisal hydrocarbon prediction inversion reservoir characterisation quality assessment tomography 2 Earthquake Seismology and Subterranean Nuclear Explosions 3 Mineral Exploration 4 Electromagnetic I Potential Field Exploration a Electromagnetic methods b Potential field methods c Ground penetrating radar d Remote sensing e inversion *Handbook of Neural Computation* E Fiesler, R Beale, 2020-01-15 The Handbook of Neural Computation is a practical hands on guide to the design and implementation of neural networks used by scientists and engineers to tackle difficult and or time consuming problems The handbook bridges an information pathway between scientists and engineers in different disciplines who apply neural networks to similar problems

An Introduction to Neural Networks Kevin Gurney, 2003-12-16 Though mathematical ideas underpin the study of neural networks the author presents the fundamentals without the full mathematical apparatus All aspects of the field are tackled including artificial neurons as models of their real counterparts the geometry of network action in pattern space gradient descent methods including back propagation associative memory and Hopfield nets and self organization and feature maps The traditionally difficult topic of adaptive resonance theory is clarified within a hierarchical description of its operation The book also includes several real world examples to provide a concrete focus This should enhance its appeal to those involved in the design construction and management of networks in commercial environments and who wish to improve their understanding of network simulator packages As a comprehensive and highly accessible introduction to one of the most important topics in cognitive and computer science this volume should interest a wide range of readers both

students and professionals in cognitive science psychology computer science and electrical engineering

An Introduction to Neural Computing, 1992 **The International Journal of Neural Networks**, 1989

Artificial Neural Networks Advisory Council on Science and Technology, 1992 This ACOST report examines the issues relevant to the exploitation of neural computing Most of the problems addressed also arise in other technological areas which have similar pervasive characteristics The UK has a significant opportunity to exploit neural computing although the commercial justification for its use has yet to be established in many areas However there is insufficient provision for the communication of business needs and technological skills between researchers and users Also existing technology transfer initiatives and the current mechanisms for managing the funding of research alone will not be sufficient to ensure successful exploitation and further efforts should be made to transfer technology to small companies
