Building Materials in Civil

Engineering Haimei Zhang, 2011. *Building Materials in Civil Engineering* Haimei Zhang, 2011-05-09. The construction of buildings and structures relies on having a thorough understanding of building materials. Without this knowledge, it would not be possible to build safe, efficient, and long-lasting buildings, structures, and dwellings. Building materials in civil engineering provides an overview of the complete range of building materials available to civil engineers and all those involved in the building and construction industries. The book begins with an introductory chapter describing the basic properties of building materials. Further chapters cover the basic properties of building materials: air-hardening cement materials, cement concrete, building mortar, wall and roof materials, construction steel, wood, waterproof materials, building plastics, heat-insulating materials, and sound-absorbing materials and finishing materials. Each chapter includes a series of questions allowing readers

to test the knowledge they have gained A detailed appendix gives information on the testing of building materials With its distinguished editor and eminent editorial committee Building materials in civil engineering is a standard introductory reference book on the complete range of building materials It is aimed at students of civil engineering construction engineering and allied courses including water supply and drainage engineering It also serves as a source of essential background information for engineers and professionals in the civil engineering and construction sector Provides an overview of the complete range of building materials available to civil engineers and all those involved in the building and construction industries Explores the basic properties of building materials featuring air hardening cement materials wall and roof materials and sound absorbing materials Each chapter includes a series of questions allowing readers to test the knowledge they have gained

High-performance Construction Materials Caijun Shi,2008 This book describes a number of high performance construction materials including concrete steel fiber reinforced cement fiber reinforced plastics polymeric materials geosynthetics masonry materials and coatings It discusses the scientific bases for the manufacture and use of these high performance materials Testing and application examples are also included in particular the application of relatively new high performance construction materials to design practice Most books dealing with construction materials typically address traditional materials only rather than high performance materials and as a consequence do not satisfy the increasing demands of today s society On the other hand books dealing with materials science are not engineering oriented with limited coverage of the application to engineering practice This book is thus unique in reflecting the great advances made on high performance construction materials in recent years This book is appropriate for use as a textbook for courses in engineering materials structural materials and civil engineering materials at the senior undergraduate and graduate levels It is also suitable for use by practice engineers including construction materials mechanical and civil engineers
