Speed Control Of Three Phase Induction Motor Using Fpga:

Speed Control of Induction Motor Using FPGA Based NI-GPIC Board Ammar Quaid Surti, 2015 Induction motors have been used in a wide range of home and industrial applications for the past several decades In homes induction motors are used in fans water pumps washing machines dish washers and garbage disposals Industrial applications of induction motors are endless They are used for conveyor belt movements robotic arms continuous process control etc For these applications controlling the speed and torque of induction motor is very important Old control systems were not power efficient and had a number of flaws in their controls Most flaws were due to carbon setting on the control circuitry contacts causing problems in properly transmitting signals between points Current control systems are mostly digitized and have a better response overall The detailed study of induction motors have helped researchers understand and design better control systems that could consume less power and be more efficient This project is designed to control a 3 phase induction motor through a newly designed development board from National Instruments SbRIO 9606 GPIC Board National Instruments 2015 13 The control is designed using Labview software and the new FPGA toolbox Corporation 2014 4 by Brian MacCleery Principal Product Manager for Clean Energy Technology and his team This toolbox helps design the system graphically and writes the code automatically in the background to be compiled and run on the FPGA board Methods used to control the induction motor are V f control Also a comprehensive research has been done on controlling the motor through SVPWM Space Vector Pulse Width Modulation With the V f control method we will monitor the RPM revolutions per minute of the motor with open loop and closed loop systems We will also look into the effects of the modulation index on the system and how modulation index affects the power quality In addition we will monitor any faults caused in the system by high current overshoots while turning on the motor or during speed change of the induction motor We will also monitor the effects of the carrier frequency on the power quality These experimental results are compared with the theoretical results for the verification of V f control

Neural and Fuzzy Logic Control of Drives and Power Systems Marcian Cirstea, 2002-10-08 Introduces cutting edge control systems to a wide readership of engineers and students The first book on neuro fuzzy control systems to take a practical applications based approach backed up with worked examples and case studies Learn to use VHDL in real world applications Introducing cutting edge control systems through real world applications Neural networks and fuzzy logic based systems offer a modern control solution to AC machines used in variable speed drives enabling industry to save costs and increase efficiency by replacing expensive and high maintenance DC motor systems The use of fast micros has revolutionised the field with sensorless vector control and direct torque control This book reflects recent research findings and acts as a useful guide to the new generation of control systems for a wide readership of advanced undergraduate and graduate students as well as practising engineers The authors guide readers quickly and concisely through the complex topics of neural networks fuzzy logic mathematical modelling of electrical machines power systems

control and VHDL design Unlike the academic monographs that have previously been published on each of these subjects this book combines them and is based round case studies of systems analysis control strategies design simulation and implementation The result is a guide to applied control systems design that will appeal equally to students and professional design engineers The book can also be used as a unique VHDL design aid based on real world power engineering applications

An FPGA Based Motor Drive for a Three-phase Induction Motor Bhanu Sri Pilla,2022 A three phase variable frequency drive with field programmable gate array FPGA control is investigated in this study With increasing demands in electric vehicles electric aircraft Unmanned Aircraft Systems and other applications the high performance motor drive employing variable frequency control with higher efficiency and reliability is an indispensable part of the ever changing technological development The main variable frequency control is based on the sinusoidal pulse width modulation SPWM technique with control hardware implemented by using a single FPGA chip The proposed SPWM control scheme has been realized using a Xilinx Arty A7 development board The system was tested with a 3 phase Infineon Trench FREDFET technology based on N channel IGBTs The control scheme regulates the AC output voltage precisely with a DC power supply Depending on the operating voltage and frequency the motor may be able to run above the rated speed to gain extra power Both simulations and test measurement results are shown
