Apply and extend the properties of multiplication to whole numbers to solve word problems involving unknowns in all positions—multiplication as an unknown, division as an unknown, and multiplication as a comparison. For example, find an unknown in $8 \times ? = 48$, $5 \times 9 = 45$, or $42 = 6 \times ?$. Represent multiplication as an area model.

Use the area model to multiply a whole number by a whole number. This strategy can be used to multiply a whole number by a one-digit number, a multiple of 10, and a two-digit number.

Represent multiplication of whole numbers using arrays, [area models](#), and [equations](#).

Understand that multiplying two whole numbers gives a product that is at least as big as the whole numbers, and that multiplying a whole number by a fraction or a decimal gives a product that is at least as big as the fraction or decimal.
