Rattan,2003-09-30 After decades of systematic collection of data describing age related changes in organisms organs tissues cells and macromolecules biogerontologists are now in a position to construct general principles of ageing and explore various possibilities of intervention using rational approaches While not giving serious consideration to the claims made by charlatans it cannot be ignored that several researchers are making genuine attempts to test and develop various means of intervention for the prevention and treatment of age related diseases for regaining the functional abilities and for prolonging the lifespan of experimental organisms This book provides the most up to date information and a critical evaluation of a variety of approaches being tried for modulating aging and longevity including dietary supplementation with antioxidants

vitamins and hormones genetic engineering life style alterations and hormesis through mild stress The goal of research on ageing is not to increase human longevity regardless of the consequences but to increase active longevity free from disability and functional dependence *Physiology of Aging* Richard A. Kenney,1989 **Aging of the Organs and Systems** Richard Aspinall,2013-06-29 During the last 40 years the study of the biological basis of aging has progressed tremendously and it has now become an independent and respectable field of study and research This volume on Aging of Organs and Systems is an attempt to bring understanding to both the aging process and the disease processes of old age Bringing together contributions from an international team of authors it will be of interest to graduates and postgraduates in the fields of medicine and nursing researchers of different aspects of biogerontology and those in the pharmaceutical cosmeceutical nutraceutical and health care industry Cellular Changes with Age Warren Andrew,1952 **Times, Cells, and Aging** Bernard Strihler,1977-01-28 Time Cells and Aging 2nd Edition presents the mechanics of cell function and the relevant implications of the molecular genetic view to the aging phenomena This book explores the biology of the aging process Comprised of 11 chapters this edition starts with an overview of the causes and mechanisms underlying the gradual deterioration of structure and function characteristics of aging This text then examines the two aspects of the behavior of man including the reasoned conscious behavior and the greater dependence on reaction patterns predicted on the successful responses of the past Other chapters explore the relationship between aging and mortality rate in animals which is a result of an organism s decreasing ability to function optimally in carrying out his vital functions The final chapter deals with the implementation of a research plan relevant to understanding the primary mechanisms of the aging process This book is a valuable resource for gerontologists biologists and molecular biologists *Biochemistry and Cell Biology of Ageing: Part II Clinical Science* J. Robin Harris,Viktor I. Korolchuk,2019-03-27 This volume of the subcellular Biochemistry series will attempt to bridge the gap between the subcellular events that are related to aging as they were described in the first volume of this set of two books and the reality of aging as this is seen in clinical practice All chapters will start from the biochemistry or cell biology where the data is available and work up towards the understanding that we have of aging in the various areas that are related to the subject Key focus points for this volume are nutrition external factors and genetics on aging There will also be chapters that will focus on various organs or tissues in which aging has been well studied like the eyes the muscles the immune system and the bones The aim of the book project and the book project that is published in concert with this volume is to bring the subcellular and clinical areas into closer contact
