interconnections between the forecasting models and methods are thoroughly explained and the gap between theory and practice is successfully bridged. Special topics are discussed such as transfer function modeling, Kalman filtering, state space models, Bayesian forecasting, and methods for forecast evaluation, comparison, and control. The book provides time series autocorrelation and partial autocorrelation plots as well as examples and exercises using real data. *Statistical Methods for Forecasting* serves as an outstanding textbook for advanced undergraduate and graduate courses in statistics, business, engineering, and the social sciences, as well as a working reference for professionals in business, industry, and government.

**Statistical Methods in the Atmospheric Sciences** Daniel S. Wilks, 2011-05-20. This revised and expanded text explains the latest statistical methods that are being used to describe, analyze, test, and forecast atmospheric data. It features numerous worked examples, illustrations, equations, and exercises with separate solutions. The book will help advanced students and professionals understand and communicate what their data sets have to say and make sense of the scientific literature in meteorology, climatology, and related disciplines.

**Statistical Methods for the Assessment of Point Source Pollution** D.T. Chapman, A.H. El-Shaarawi, 2012-12-06. This book contains the proceedings of a workshop on Statistical Methods for the Assessment of Point Source Pollution held September 12-14, 1988, at the Canada Centre for Inland Waters in Burlington, Ontario, Canada. The objectives of the workshop were to advance the art, science, and application of statistical methods to current water quality issues by stimulating discussions and disseminating ideas and information. The emphasis was on statistical problems associated with monitoring and controlling discharges from industries and municipalities and assessing the impact of these discharges on receiving water quality. b) provide a forum for managers, engineers, scientists, and statisticians to present and discuss techniques for evaluating water quality data and planning monitoring activities. c) provide a published state-of-the-art summary of the application of statistical methods for the assessment of point source discharges and their impact on water quality. The papers contained in this volume cover a number of topics that are of concern not only for monitoring and assessing point source pollution but also for other environmental problems.

*Statistical Methods in the Atmospheric Sciences* Daniel S. Wilks, 1995-01-23. This book introduces and explains the statistical methods used to describe, analyze, test, and forecast atmospheric data. It will be useful to students, scientists, and other professionals who seek to make sense of the scientific literature in meteorology, climatology, or other geophysical disciplines, or to understand and communicate what their atmospheric data sets have to say. The book includes chapters on exploratory data analysis, probability distributions, hypothesis testing, statistical weather forecasting, forecast verification, time series analysis, and multivariate data analysis. Worked examples, exercises, and illustrations facilitate understanding of the material. An extensive and up-to-date list of references allows the reader to pursue selected topics in greater depth.
