McAvoy,2013-08-14 This Best Practice Guide on the Control of Iron and Manganese in Water Supply is one of a series produced by the International Water Association s Specialist Group on Metals and Related Substances in Drinking Water Iron and manganese are often found in soft upland water sources associated with natural organic matter and are also

commonly found in the groundwater abstracted from confined and unconfined aquifers The presence of iron and manganese in water is one of the most frequent reasons for customers complaint due to aesthetic issues yellow brown and black or stains on laundry and plumbing fixtures These two metals can be removed fairly readily by physico chemical treatment The municipal treatment systems deployed derive benefit from their larger scale particularly in relation to control but the processes used are less suitable for the numerous small supplies that are the most common water supplies throughout Europe especially in rural areas One important source of iron in drinking water is from old corroded cast iron water mains historically the material used most commonly in supply networks Replacement and refurbishment is very expensive and the major challenge is how best to prioritize available expenditure The purpose for this Best Practice Guide on the Control of Iron and Manganese in Water Supply is to give readers the broad view of a problem based on state of the art compilation of the range of scientific engineering regulatory and operational issues concerned with the control of iron and manganese in drinking water The Guide is of interest to water utility practitioners health agencies and policy makers as well as students on civil engineering and environmental engineering courses Authors Dr Adam Postawa AGH University of Science and Technology Faculty of Geology Geophysics and Environment Protection Krakow Poland and Dr Colin R Hayes University of Swansea UK Chair of IWA Specialist Group on Metals and Related Substances in Drinking Water

Metallurgy and Corrosion Control in Oil and Gas Production Robert Heidersbach, 2018-09-17 Details the proper methods to assess

prevent and reduce corrosion in the oil industry using today's most advanced technologies. This book discusses upstream operations with an emphasis on production and pipelines which are closely tied to upstream operations. It also examines protective coatings, alloy selection, chemical treatments, and cathodic protection, the main means of corrosion control. The strength and hardness levels of metals is also discussed as this affects the resistance of metals to hydrogen embrittlement, a major concern for high strength steels and some other alloys. It is intended for use by personnel with limited backgrounds in chemistry, metallurgy, and corrosion and will give them a general understanding of how and why corrosion occurs and the practical approaches to how the effects of corrosion can be mitigated.

Metallurgy and Corrosion Control in Oil and Gas Production, Second Edition updates the original chapters while including a new case studies chapter. Beginning with an introduction to oilfield metallurgy and corrosion control, the book provides in-depth coverage of the field with chapters on chemistry of corrosion, corrosive environments, materials, forms of corrosion, corrosion control, inspection, monitoring, and testing, and oilfield equipment. Covers all aspects of upstream oil and gas production from downhole drilling to pipelines and tanker terminal operations. Offers an introduction to corrosion for entry level corrosion control specialists. Contains detailed photographs to illustrate descriptions in the text.

Metallurgy and Corrosion Control in Oil and Gas Production, Second Edition is an excellent book for engineers and related professionals in the oil and gas production industries. It will also be an asset to the entry level corrosion control professional who may have a theoretical background in metallurgy, chemistry, or a related field but who needs to understand the practical limitations of large scale industrial operations associated with oil and gas production.
