the Method of Moments Andreas Behr, Sebastian Tente, 2008 Stochastic frontier analysis S. C. Kumbhakar, 2003 *The Comparison of Stochastic Frontier Analysis with Panel Data Models* Miao Zhang, 2012 From the idea of efficiency raised by Koopmans in 1951 and the panel data first introduced into the efficiency analysis by Pitt and Lee 1981 and Schmidt and Sickles 1984 the techniques of stochastic frontier analysis are fast developed and the applications of stochastic frontier are widely used in different areas such as education industry and hospital But most researchers focus on only one aspect either the development of new models or empirical applications This thesis attempts to fill the gap to get a general idea of the properties of different panel data stochastic frontier models on both statistical aspects and economic aspects by the comparison of different models applied to different production applications The thesis is also attempt to shed light on whether particular panel data stochastic frontier models are better suited to different data sets The models selected capture the simplest situation with no heterogeneity or heteroscedasticity and complicated ones with exogenous variables included in the models Not only the classical models such as the Pitt and Lee 1981 and Battese and Coelli 1992 1995 but also the new developed models such as the latent class model and fixed management model are detected in the thesis On the economic aspect the data selected captures both microeconomic and macroeconomic with the application to the World GDP and the Italian manufacturing industry The results show that the panel data stochastic frontier models perform better on the microeconomic level than on the macroeconomic level the classical models perform better than the new developed ones some panel data stochastic frontier models make ideal assumptions but the requirements to the dataset are hard to achieve that the influence from the exogenous variables is quite strong *Stochastic Frontier Analysis Under Regression Discontinuity Design* □□□, 2019 **A Premier Guide to Data Analysis** Dr. Sajal Jana, Dr. Jhumur Sengupta , 2024-04-01 The book is written to provide a strong foundation of data analysis techniques based on statistical and econometric models using STATA and R The objective is to explain the concepts and their applications with practical illustrations It covers topics such as data representation statistical techniques and regression analysis including non linear time series and panel data models All the chapters include real life illustrations and use real world data sets to provide examples of how to explore data build models find results and evaluate using codes in STATA and R The book attempts to provide an easier learning experience to the readers The practical approach would enable readers to develop the required skills to perform data analysis using STATA and R **Stochastic Frontier Analysis** Philip Stevens, 2003
