Autosar Runtime Environment And Virtual Function Bus:

Reference Architectures for Critical Domains Elisa Yumi Nakagawa,Pablo Oliveira Antonino,2023-03-14 This book presents reference architecture as a key blueprint to develop and evolve critical software intensive systems emphasizing both the state of the art in research and successful industrial cases After outlining the theoretical foundations of reference architecture and presenting an overview of a number of reference architectures proposed over the recent years this book dives into a set of critical application domains including defense health automotive avionics and Industry 4 0 highlighting the respective most relevant reference architectures that have impacted these domains the experience and lessons learned insights gained benefits and drawbacks and factors that make these architectures sustainable The book finishes with the most relevant directions for future advances in reference architectures The content of this book is useful for researchers and advanced professionals in industry in the areas of computing and engineering as well as in critical application domains that increasingly require interconnected large and complex software intensive systems

Algorithm & SoC Design for Automotive Vision Systems Jaeseok Kim,Hyunchul Shin,2014-06-29 An emerging trend in the automobile industry is its convergence with information technology IT Indeed it has been estimated that almost 90% of new automobile technologies involve IT in some form Smart driving technologies that improve safety as well as green fuel technologies are quite representative of the convergence between IT and automobiles The smart driving technologies include three key elements sensing of driving environments detection of objects and potential hazards and the generation of driving control signals including warning signals Although radar based systems are primarily used for sensing the driving environments the camera has gained importance in advanced driver assistance systems ADAS This book covers system on a chip SoC designs including both algorithms and hardware related with image sensing and object detection by using the camera for smart driving systems It introduces a variety of algorithms such as lens correction super resolution image enhancement and object detections from the images captured by low cost vehicle camera This is followed by implementation issues such as SoC architecture hardware accelerator software development environment and reliability techniques for automobile vision systems This book is aimed for the new and practicing engineers in automotive and chip design industries to provide some overall guidelines for the development of automotive vision systems It will also help graduate students understand and get started for the research work in this field

Composition of Embedded Systems. Scientific and Industrial Issues Fabrice Kordon,Oleg Sokolsky,2007-12-06 This book constitutes the thoroughly refereed post proceedings of the 13th International Monterey Workshop on Composition of Embedded Systems Scientific and Industrial Issues held in Paris France in October 2006 The 12 revised full papers presented were carefully selected during two rounds of reviewing and improvement from numerous submissions The workshop discussed a range of challenges in embedded systems design that require further major advances in technology
