Awakening The Past:

Walter Benjamin's Antifascist Education Tyson E. Lewis, 2020-02-01 A comprehensive study of education in the writings of Walter Benjamin. *Walter Benjamin's Antifascist Education* is the first comprehensive analysis of educational themes across the entirety of the critical theorist's diverse writings. Starting with Benjamin's early reflections on teaching and learning, Tyson E. Lewis argues that the aesthetic and cultural forms to which Benjamin so often turned—namely radio broadcasts, children's theatrical productions, cityscapes, public cinemas, and word games—swell with educational potentialities. What emerges from Lewis's reading is a constellational curriculum composed of minor practices such as poor teaching, absentminded learning, and nondurational studying. This curriculum carries political significance, offering an antidote to past and present forms of fascist manipulation, hardness, and coldness. *Walter Benjamin's Antifascist Education* is a testimony to Benjamin's belief that everyone is an educator and everyone needs to be educated, and everything is education. Taking up the multifaceted Benjaminian conception of educational life—a life of studious straying and self-reflection at once critical and mimetic, and following its untoward trajectory in object areas as diverse as slapstick film, riddles, cityscapes, and children's theater—this subtle, imaginative, and comprehensive analysis speaks directly to the moral and spiritual crisis of the present. Howard Eiland, Massachusetts Institute of Technology.

Molecular Mechanisms of Spondyloarthropathies Carlos López-Larrea, Roberto Díaz-Peña, 2009-12-03 It is now over ten years since we edited the first edition of HLA B27 in the Development of Spondyloarthropathies. SpA. It is obvious that over this period an enormous amount of information concerning SpA and HLA B27 has accumulated and this has been reflected in the knowledge of molecular mechanism of the spondyloarthropathies. Discussion for such a book took initial form at the outstanding 4th Gent Symposium on SpA in October 2006 but was not formally commissioned by Landes Bioscience until early 2007. *Molecular Mechanisms of Spondyloarthropathies* aims to synthesize this growing knowledge and present all the current studies concerning the basic research of SpA. Over the last decade enormous progress has been made in the understanding of the molecular and cellular processes that lead to disease pathology. Recognition of the pathways involved in the pathogenic mechanisms of disease and the potential to target specific immune effector functions have opened the door to a wide range of innovative treatment opportunities for the SpA. Thus we believe that the understanding of the specific molecular mechanisms involved would help to design highly specific drugs in the future. The contributors are among the best in their field and reflect the state of the art of research and current opinion of rheumatologists and immunologists.
