Machine Learning Proceedings 1992 Peter Edwards, Derek Sleeman, 2014-06-28 Machine Learning Proceedings 1992

A Volterra Approach to Digital Predistortion Carlos Crespo Cadenas, Maria Jose Madero Ayora, Juan A.

Becerra, 2025-01-15 Thorough discussion of the theory and application of the Volterra series for impairments compensation in RF circuits and systems A Volterra Approach to Digital Predistortion Sparse Identification and Estimation offers a comprehensive treatment of the Volterra series approach as a practical tool for the behavioral modeling and linearization of nonlinear wireless communication systems Although several perspectives can be considered when analyzing nonlinear effects this book focuses on the Volterra series to study systems with real valued continuous time RF signals as well as complex valued discrete time baseband signals in the digital signal processing field A unified framework provides the reader with in depth understanding of the available Volterra based behavioral models in particular the book emphasizes those models derived by exploiting the knowledge of the physical phenomena that produce different types of nonlinear distortion From these distinctive standpoints this work remarkably contributes to theoretical issues of behavioral modeling The book contributes to practical state of the art questions on linearization granting the reader practical guidance in designing digital predistortion schemes and adopting up to date machine learning methods to exploit the sparsity of the identification problem and reducing computational complexity Later chapters include information on Identification of Volterra based models as a linear regression problem allowing the adoption of sparse machine learning methods to reduce computational complexity while keeping rich model structures Deduction of Volterra models based on circuit model knowledge offering pruned model structures that are better fitted for specific scenarios Wireless communication systems and the nonlinear effects produced by power amplifiers mixers frequency converters or IQ modulators Digital predistortion schemes and experimental results for both indirect and direct learning architectures A Volterra Approach to Digital Predistortion Sparse Identification and Estimation is an essential reference on the subject for engineers and technicians who develop new products for the linearization of wireless transmitters as well as researchers and students in fields and programs of study related to wireless communications

Modelling and Control of Dynamic Systems Using Gaussian Process Models Juš Kocijan, 2015-11-21 This monograph opens up new horizons for engineers and researchers in academia and in industry dealing with or interested in new developments in the field of system identification and control It emphasizes guidelines for working solutions and practical advice for their implementation rather than the theoretical background of Gaussian process GP models The book demonstrates the potential of this recent development in probabilistic machine learning methods and gives the reader an intuitive understanding of the topic The current state of the art is treated along with possible future directions for research Systems control design relies on mathematical models and these may be developed from measurement data This process of system identification when based on GP models can play an integral part of control design in data based control and its

description as such is an essential aspect of the text The background of GP regression is introduced first with system identification and incorporation of prior knowledge then leading into full blown control The book is illustrated by extensive use of examples line drawings and graphical presentation of computer simulation results and plant measurements The research results presented are applied in real life case studies drawn from successful applications including a gas liquid separator control urban traffic signal modelling and reconstruction and prediction of atmospheric ozone concentration A MATLAB toolbox for identification and simulation of dynamic GP models is provided for download

Functional and High-Dimensional Statistics and Related Fields Germán Aneiros,Ivana Horová,Marie Hušková,Philippe Vieu,2020-06-19 This book presents the latest research on the statistical analysis of functional high dimensional and other complex data addressing methodological and computational aspects as well as real world applications It covers topics like classification confidence bands density estimation depth diagnostic tests dimension reduction estimation on manifolds high and infinite dimensional statistics inference on functional data networks operatorial statistics prediction regression robustness sequential learning small ball probability smoothing spatial data testing and topological object data analysis and includes applications in automobile engineering criminology drawing recognition economics environmetrics medicine mobile phone data spectrometrics and urban environments The book gathers selected refereed contributions presented at the Fifth International Workshop on Functional and Operatorial Statistics IWFO in Brno Czech Republic The workshop was originally to be held on June 24 26 2020 but had to be postponed as a consequence of the COVID 19 pandemic Initiated by the Working Group on Functional and Operatorial Statistics at the University of Toulouse in 2008 the IWFO workshops provide a forum to discuss the latest trends and advances in functional statistics and related fields and foster the exchange of ideas and international collaboration in the field

Association Analysis Techniques and Applications in Bioinformatics Qingfeng Chen,2024-04-25 Advances in experimental technologies have given rise to tremendous amounts of biology data This not only offers valuable sources of data to help understand biological evolution and functional mechanisms but also poses challenges for accurate and effective data analysis This book offers an essential introduction to the theoretical and practical aspects of association analysis including data pre processing data mining methods algorithms and tools that are widely applied for computational biology It covers significant recent advances in the field both foundational and application oriented helping readers understand the basic principles and emerging techniques used to discover interesting association patterns in diverse and heterogeneous biology data such as structure function correlations and complex networks with gene protein regulation The main results and approaches are described in an easy to follow way and accompanied by sufficient references and suggestions for future research This carefully edited monograph is intended to provide investigators in the fields of data mining machine learning artificial intelligence and bioinformatics with a profound guide to the role of association analysis in computational biology It is also very useful as a general source of information on association analysis and as an overall

accompanying course book and self study material for graduate students and researchers in both computer science and bioinformatics
