Chemical Reactor Design and Operation K R Westerterp W P M van Swaaij and A A C M Beenackers Chemical Reaction Engineering Laboratories Twente University of Technology Enschede The Netherlands This is a comprehensive handbook on the design and operation of chemical reactors which are vital elements in every manufacturing process The book offers an introduction to the modern literature and covers in depth the relevant theory of chemical reactors The theory is illustrated by numerous worked examples typical to chemical reaction engineering practice in research development design and operation The examples range from fine chemicals to large scale production and from water purification to metallurgical processes commencing with simple homogenous model reactors and then moving to the complicated multi phase heterogeneous reactors met with in reality All the examples are based on the industrial experience of the authors Much effort is dedicated to the behaviour of reactors in practice and to the capacity yield and selectivity of the reactor The book is thoroughly indexed and cross referenced This edition will be particularly useful to undergraduate and graduate students studying chemical reactors Contents Fundamentals of chemical reactor calculations Model reactors single reactions isothermal single phase reactor calculations Model reactors multiple reactions isothermal single phase reactors Residence time distribution and mixing in continuous flow reactors Influence of micromixing on chemical reactions The role of the heat effect in model reactors Multi phase reactors single reactions Multi phase reactors multiple reactions Heat effects in multi phase reactors The authors The authors have accumulated a long experience both in fine chemicals and in the petrochemicals industry in Europe as well as abroad Currently they are jointly responsible for the research work in chemical reaction engineering and process development at Twente University Several new reactor types and new processes have been developed at their institute and present research interests include gasification fluidization and gas liquid reactors three phase reactors high pressure technology in chemical reaction engineering thermal behaviour of heterogeneous reactors and computer design and economic evaluation of reaction units and chemical plants *Chemical Reactor Design and Technology* Hugo de Lasa, 2012-12-06 Today's frustrations and anxieties resulting from two energy crises in only one decade show us the problems and fragility of a world built on high energy consumption accustomed to the use of cheap non renewable energy and to the acceptance of existing imbalances between the resources and demands of countries Despite all these stressing factors our world is still hesitating about the urgency of undertaking new and decisive research that could stabilize our future Could this trend change in the near future In our view two different scenarios are possible A renewed energy tension could take place with an unpredictable timing mostly related to political and economic factors This could bring again scientists and technologists to a new state of shock and awaken our talents A second interesting and beneficial scenario could result from the positive influence of a new generation of researchers that with or without immediate crisis acting both in industry and

academia will face the challenge of developing technologies and processes to pave the way to a less vulnerable society Because Chemical Reactor Design and Technology activities are at the heart of these required new technologies the timeliness of the NATO Advanced Study Institute at the University of Western Ontario London was very appropriate
