## CORE DRILLING

Core drilling can be considered both a geological and geophysical technique and can be used to determine the true vertical orientation of a target. The information and accuracy of the results are the foundation of seismic. Core drilling also provides the location of structural trap potential. Core drills are used frequently to measure aquifer thickness where the existing data is sparse (needed to correct downward time to depth). The two locations are determined and corrected by geophysics and geologists. In addition, geophysical logging (acoustic, resistivity, and magnetic) is used to provide information on the lithology and rock types. Various methods are used to measure permeability and porosity throughout the entire core and to identify any fractures.

## SEISMIC

Seismic techniques have recently had a major impact on petroleum exploration. They provide a high resolution view of the subsurface.
