**Optimized Framework for High-Speed Object Detection in Badminton Using Deep Learning** Ashokkumar Kulandasamy, 2025-02-18. Research Paper, undergraduate from the year 2024 in the subject Engineering Computer Engineering grade Graduate course Graduate B.E. language English. Abstract: Object detection is an important task in sports analysis, particularly in badminton, where the high-speed motion of the shuttlecock can make it challenging to detect. Here, we suggest a badminton high-speed object detection system using YOLO, a real-time object detection model. Our system is trained on a dataset of badminton images and videos.

along with corresponding object annotations The performance of our system is evaluated using several metrics including mean average precision precision recall F1 score and speed The results show that our system can achieve high accuracy and real time performance making it suitable for use in badminton analysis applications Our system can be used to detect and track the shuttlecock in real time providing valuable insights into the game such as the speed and trajectory of the shuttlecock which can be used to improve the performance of players and coaches **Conference Record** ,1989 **Event Processing: Designing IT Systems for Agile Companies** K.
