In Situ Remediation Engineering:

In Situ Remediation Engineering Suthan S. Suthersan, Fred C. Payne, 2004-12-28 *In Situ Remediation Engineering* provides a comprehensive guide to the design and implementation of reactive zone methods for treatment of all major classes of groundwater contamination. It teaches the fundamentals that underlie development of cost effective reactive zone strategies, guides the selection of cost effective remedial strategies, and provides environmental engineers and scientists with tools to achieve optimal deployment of source area reactive barrier and site wide treatments. It offers extensive coverage of remedial system operation, discussing reagent injection strategies, interpretation of process monitoring results for biological and chemical reactive zone systems, and impacts of treatment processes on aquifer hydraulic characteristics. *In Situ Bioremediation of Perchlorate in Groundwater* Hans F. Stroo, C. Herb Ward, 2008-12-02 In the late 1970s and early 1980s our nation began to grapple with the legacy of past disposal practices for toxic chemicals. With the passage in 1980 of the Comprehensive Environmental Response Compensation and Liability Act (CERCLA), commonly known as Superfund, it became the law of the land to remediate these sites. The U.S. Department of Defense (DoD), the nation's largest industrial organization, also recognized that it too had a legacy of contaminated sites. Historic operations at Army, Navy, Air Force, and Marine Corps facilities, ranges, manufacturing sites, shipyards, and depots had resulted in widespread contamination of soil, groundwater, and sediment. While Superfund began in 1980 to focus on remediation of heavily contaminated sites largely abandoned or neglected by the private sector, the DoD had already initiated its Installation Restoration Program in the mid 1970s. In 1984 the DoD began the Defense Environmental Restoration Program (DERP) for contaminated site assessment and remediation. Two years later the U.S. Congress codified the DERP and directed the Secretary of Defense to carry out a concurrent program of research, development, and demonstration of innovative remediation technologies. As chronicled in the 1994 National Research Council report *Ranking Hazardous Waste Sites for Remedial Action*, our early estimates on the cost and suitability of existing technologies for cleaning up contaminated sites were wildly optimistic. Original estimates in 1980 projected an average Superfund cleanup cost of a mere 3%. **The Handbook of Groundwater Engineering** John H. Cushman, Daniel M. Tartakovsky, 2016-11-25 This new edition adds several new chapters and is thoroughly updated to include data on new topics such as hydraulic fracturing, CO₂ sequestration, sustainable groundwater management, and more. Providing a complete treatment of the theory and practice of groundwater engineering, this new handbook also presents a current and detailed review of how to model the flow of water and the transport of contaminants both in the unsaturated and saturated zones, covers the protection of groundwater and the remediation of contaminated groundwater. *Contaminated Land Management* Judith Nathanail, Paul Bardos, Paul Nathanail, 2011-11 **Handbook of Environmental Remediation** Chaudhery Mustansar Hussain, 2020-03-19 Environmental remediation technologies to control or prevent pollution from hazardous waste material is a growing research area in academia and industry and is a matter of utmost concern to public.

health to improve ecology and to facilitate the redevelopment of a contaminated site Recently in situ and ex situ remediation technologies have been developed to rectify the contaminated sites utilizing various tools and devices through physical chemical biological electrical and thermal processes to restrain remove extract and immobilize mechanisms to minimize the contamination effects This handbook brings altogether classical and emerging techniques for hazardous wastes municipal solid wastes and contaminated water sites combining chemical biological and engineering control methods to provide a one stop reference This handbook presents a comprehensive and thorough description of several remediation techniques for contaminated sites resulting from both natural processes and anthropogenic activities Providing critical insights into a range of treatments from chemical oxidation thermal treatment air sparging electrokinetic remediation stabilization solidification permeable reactive barriers thermal desorption and incineration phytoremediation biostimulation and bioaugmentation bioventing and biosparging through ultrasound assisted remediation methods electrochemical remediation methods and nanoremediation this handbook provides the reader an inclusive and detailed overview and then discusses future research directions Closing chapters on green sustainable remediation economics health and safety issues and environmental regulations around site remediation will make this a must have handbook for those working in the field

Geoenvironmental Engineering Raymond Nen Yong, Hywel R. Thomas, 2004-06-30 This new book contains the proceedings of the 4th Geoenvironmental Engineering Conference organised by the British Geotechnical Association and Cardiff University's School of Engineering held in Stratford Upon Avon in June 2004 The theme of the conference was Integrated Management of Groundwater and Contaminated Land This book is a compilation of peer reviewed papers grouped according to the sessions under which they were presented at the conference Issues associated with Geoenvironmental Engineering continue to be a major preoccupation for Governments public and private organisations and the general community around the world The conference brought together people working in industry academia and the public sector to discuss the latest ideas and developments in Geoenvironmental Engineering and related fields The papers in these proceedings reflect the work being undertaken across the discipline This volume is an indispensable source of information on current research and practice in the field of integrated management of groundwater and contaminated land

Remediation Engineering Suthan S. Suthersan, Jeff McDonough, 1996-10-24 In many cases the application of in situ technologies evolved as a necessity from a cost perspective However the basic understanding of the mechanisms and theory behind these technologies was treated as a black box Although we have seen some tremendous successes in the application of remediation technologies over the past several years we have also seen many cases in which a technology has been incorrectly or inappropriately applied In most cases this misapplication has been the result of a poor understanding of the basic concepts and mechanisms behind the technologies Without proper understanding the potential for misapplication of technologies remains a serious economic and technical threat

Emerging Contaminants Handbook Caitlin H. Bell, Margaret

Gentile, Erica Kalve, Ian Ross, John Horst, Suthan Suthersan, 2019-01-15 The term emerging contaminants and its multiple variants has come to refer to unregulated compounds discovered in the environment that are also found to represent a potential threat to human and ecological receptors. Such contaminants create unique and considerable challenges as the push to address them typically outpaces the understanding of their toxicity, their need for regulation, their occurrence, and techniques for treating the environmental media they affect. With these challenges in mind, this handbook serves as a primer regarding the topic of emerging contaminants with current and practical information to help support the goal of protection where they are encountered. Features: Explores the definition, identification, and life cycle of emerging contaminants. Reviews current information on sources, toxicology, regulation, and new tools for characterization and treatment of 1,4-dioxane, a mature emerging contaminant; its life cycle; per- and polyfluoroalkyl substances (PFASs), a newer group of emerging contaminants; hexavalent chromium, a former emerging contaminant with evolving science; 1,2,3-trichloropropane, progressing in its emerging contaminant life cycle. Provides thoughts on opportunities in managing emerging contaminants to help balance uncertainty, compress life cycle, and optimize outcomes.

Groundwater and Subsurface Remediation

Helmut Kobus, Baldur Barczewski, Hans-Peter Koschitzky, 2012-12-06 The complex topic of in situ subsurface remediation technologies has been addressed at an international symposium at the Universitat Stuttgart on September 26 and 27, 1995, on the occasion of the inauguration of the research facility VEGAS (Versuchseinrichtung zur Grundwasser und Altlastensanierung). The results are contained in this book with 22 contributions from leading experts in the field from Europe and North America. The book illustrates the role of large scale experiments in groundwater and subsurface remediation research. The subtopics address the various links between conventional laboratory experiments, technology scale experiments, and field site studies, showing the contribution of large scale experiments to bridging the gap between small scale investigations and large scale field investigations. Upscaling: The interdisciplinary nature of the problems requires a multidisciplinary approach. Therefore, the idea has been followed to bring together the various disciplines involved in the different aspects and facets of subsurface flow, transport, and transformation, such as hydraulics and hydrology, physics, formation involving such diverse disciplines as chemistry, microbiology, geology, industrial chemical, and hydraulic engineering, mathematics, and hydroinformatics. The individual contributions from these diversified fields address the subject from different angles in an attempt to form a coherent picture of the various aspects of the complex problems of subsurface remediation. The focus is on research approaches and strategies with respect to the development of new and improved technologies and to the role of large scale experiments in research and application.
