Handbook contains a gold mine of articles by leading scholars on what has come to be known as the third methodological movement in social research. Aimed at surveying the differing viewpoints and disciplinary approaches of mixed methods, this breakthrough book examines mixed methods from the research enterprise to paradigmatic issues to application. The book also discusses the strengths and weaknesses of mixed methods designs and provides an array of specific examples in a variety of disciplines from psychology to nursing. The book closes with a brief section on how to teach and perform collaborative research using a mixed methods research design. Written so that it can be used either as a pedagogical tool or as a reference for researchers, the book is rich in examples and includes a glossary, easy-to-follow diagrams, and tables to help readers become more familiar with the language and controversies in this evolving area.

A claim examination supports more than 400 contributors from the US and abroad present approximately 1,000 comprehensive in-depth, well-referenced entries that vary in length from 50 to 2,500 words. The attractively designed and produced volumes (1,351 total pages) consist of easily legible text and figures, the front matter occupying 46 pages and the index 40. This defining work will be valuable to readers and researchers in social sciences and humanities at all academic levels. SAGE Reference is proud to announce The SAGE Encyclopedia of Social Science Research Methods, a three-volume resource that is a first of its kind developed by the leading publisher of social science research methods books and journals. This unique, multi-volume reference set offers readers an all-encompassing education in the ways of social science researchers. Written to be accessible to general readers, entries do not require any advanced knowledge or experience to understand the purposes and basic principles of any of the methods. The Encyclopedia features two major types of entries: definitions consisting of a paragraph or two which provide a quick explanation of a methodological term and topical treatments or essays discussing the nature, history, application, example, and implication of using a certain method. Also included are suggested readings and references for future study. To help provide a more complete explanation than is often achieved within the scope of a single article, key terms and concepts appear in small capital letters to refer readers to related terms explained elsewhere. In addition to epistemological issues that influence the nature of research questions and assumptions, The SAGE Encyclopedia of Social Science Research Methods tackles topics not normally viewed as part of social science research methodology, from philosophical issues such as poststructuralism to advanced statistical techniques. In covering the full range of qualitative and

quantitative data analyses this key reference offers an integrated approach that allows the reader to choose the most appropriate and robust techniques to apply to each situation Many entries treat traditional topics in a novel way stimulating both interest and new perspectives One example is the entry Econometrics by Professor Damodar Gujarati Following a process which many educators preach but seldom practice Gujarati walks the reader twice through the research process from economic theory to data and models to analysis once in principle and a second time with an example In using the ordinary process of economic research to achieve an extraordinary impact he leaves the reader thinking not only about methods and models but also the fundamental purpose of econometrics Topics Covered Analysis of Variance Association and Correlation Basic Qualitative Research Basic Statistics Causal Modeling Structural Equations Discourse Conversation Analysis Econometrics Epistemology Ethnography Evaluation Event History Analysis Experimental Design Factor Analysis and Related Techniques Feminist Methodology Generalized Linear Models Historical Comparative Interviewing in Qualitative Research Latent Variable Model Life History Biography Loglinear Models Categorical Dependent Variables Longitudinal Analysis Mathematics and Formal Models Measurement Level Measurement Testing and Classification Multiple Regression Multilevel Analysis Qualitative Data Analysis Sampling in Surveys Sampling in Qualitative Research Scaling Significance Testing Simple Regression Survey Design Time Series Key Features Over 900 entries arranged A to Z Each entry is written by a leading authority in the field covering both quantitative and qualitative methods Covers all disciplines within the social sciences Contains both concise definitions and in depth essays Three volumes and more than 1500 pages
