Introduction to Environmental Engineering Mackenzie L. Davis, 1992 *Physicochemical Treatment Processes* Lawrence K. Wang, Yung-Tse Hung, Nazih K. Shamas, 2007-11-13 The past 30 years have seen the emergence of a growing desire worldwide to take positive actions to restore and protect the environment from the degrading effects of all forms of pollution air noise solid waste and water Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste exists we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved The principal intention of the Handbook of Environmental Engineering series is to help readers formulate answers to the last two questions The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However realization of the ever increasing complexity and interrelated nature of current environmental problems makes it imperative that intelligent planning of pollution abatement systems be undertaken *Essentials of Environmental Engineering* Frank R. Spellman, 2020-01-23 *Essentials of Environmental Engineering* is designed for use in an introductory university undergrad course This book introduces environmental engineering as a profession applying science and math theories to describe and explore the relationship between environmental science and environmental engineering Environmental engineers work to sustain human existence by balancing human needs from impacts on the environment with the natural state of the environment In the face of global pollution diminishing natural resources increased population growth especially in disadvantaged countries geopolitical warfare global climate change cyclical and or human caused and other environmental problems it is clear that we live in a world that is undergoing rapid ecological transformation Because of these rapid changes the role of environmental engineering has become increasingly prominent Moreover advances in technology have created a broad array of modern environmental issues To mitigate these issues we must capitalize on environmental protection and remediation opportunities presented by technology *Essentials of Environmental Engineering* addresses these very issues It was written with the student in mind Complex topics are explained in an easy to understand

format and style Numerous examples are given and chapter review questions along with solutions are provided in the text

Troubled Waters Richard A. Bartlett, 1995 Since 1908 the corporate giant now known as Champion International has operated a pulp and paper mill along the banks of the Pigeon River in Canton North Carolina As a result during most of those

years this once sparkling Appalachian stream has been virtually useless except as an industrial sewer foamy foul smelling molasses colored By polluting the river the mill that brought prosperity to Canton stunted the economic growth of the downstream communities in Cocke County Tennessee Although public pressure to clean up the Pigeon surfaced intermittently it has been only in the years since 1985 that two organizations the Pigeon River Action Group and the Dead Pigeon River Council have mounted a sustained drive against the ongoing pollution Today following a multimillion dollar upgrading of the Champion mill the Pigeon River is cleaner but hardly pristine Moreover there is little evidence that Champion carried out its modernization for any reasons other than economic ones
