Convergence of Terahertz Sciences in Biomedical Systems Gun-Sik Park, Yong Hyup Kim, Haewook Han, Joon Koo Han, Jaewook Ahn, Joo-Hiuk Son, Woong-Yang Park, Young Uk Jeong, 2012-10-19 Recent technological breakthrough in the field of Terahertz radiation has triggered new applications in biology and biomedicine

Particularly biological applications are based on the specific spectroscopic fingerprints of biological matter in this spectral region. Historically, with the discovery of new electromagnetic wave spectrum, we have always discovered new medical diagnostic imaging systems. The use of terahertz wave was not realized due to the absence of useful terahertz sources. Now, after successful generation of THz waves, it is reported that a great potential for THz wave exists for its resonance with bio molecules. There are many challenging issues such as development of THz passive and active instrumentations, understanding of THz Bio interaction for THz spectroscopy, THz Bio nonlinear phenomena, and safety guideline and THz imaging systems. Eventually, the deeper understanding of THz Bio interaction and novel THz systems enable us to develop powerful THz biomedical imaging systems which can contribute to biomedical industry. This is a truly interdisciplinary field and convergence technology where the communication between different disciplines is the most challenging issue for the success of the great works. One of the first steps to promote the communications in this convergence technology would be teaching the basics of these different fields to the researchers in a plain language with the help of *Convergence of Terahertz Science in Biomedical Systems*, which is considered to be 3-4th year college students or beginning level of graduate students. Therefore, this type of book can be used by many people who want to enter or understand this field. Even more, it can be used for teaching in universities or research institutions.
