Modern Trends in Diatom Identification Gabriel Cristóbal, Saúl Blanco, Gloria Bueno, 2020-05-28 High resolution images of phytoplankton cells such as diatoms or desmids which are useful for monitoring water quality can now be provided by digital microscopes facilitating the automated analysis and identification of specimens Conventional approaches are based on optical microscopy however manual image analysis is impractical due to the huge diversity of this group of microalgae and its great morphological plasticity As such there is a need for automated recognition techniques for diagnostic tools e.g environmental monitoring networks early warning systems to improve the management of water resources and decision making processes Describing the entire workflow of a bioindicator system from capture analysis and identification to the determination of quality indices this book provides insights into the current state of the art in automatic identification systems in microscopy

Climate Change and Ocean Renewable Energy Soufiane Haddout, Priya Krishnamoorthy Lakshmi, Antonio Mubango Hogue, 2023-02-15

Renewable energy is energy that is collected from renewable resources that are naturally replenished on a human timescale. Renewable energy includes sources such as sunlight, tides, waves, wind, rain, and geothermal heat. According to BP's 2018 Energy Outlook, renewable energy will be the fastest growing source of energy, increasing fivefold by 2040, thus providing around 14% of global primary energy at that future point. On the other hand, climate change is bringing about rising temperatures which have significant negative impacts on humans and the environment, and transitioning to renewable energy sources such as biofuels can help meet this challenge. Transitioning to renewable energy and reducing reliance on fossil fuels is one way to help slow down the effects of climate change. While renewables used to be a more expensive option, new clean energy technologies are lowering costs and helping to move economies away from fossil fuels.

The 1st International Conference on Climate Change and Ocean Renewable Energy (CCORE) 2022 is a virtual conference held from November 4-7, 2022, presenting experiences and ideas through research talks and presentations from diverse fields in climate change and ocean renewable energy. This event offers a platform in bringing together a forum for students, postdocs, and established scientists to exchange their ideas and contribute to an integrative approach to climate change and ocean renewable energy.
