Advancements in Multi-Omics and Bioinformatics for the Management of Solid Malignancies Pengpeng Zhang, Wantao Wu, Qiang Wang, Rana A. Youness, Noha Mousaad Elemam, Jian Song, 2025-10-31 In an era where precision oncology is paramount the fusion of multi omics and bioinformatics has emerged as a revolutionary force in the battle against solid malignancies which constitute a predominant portion of cancer cases globally This research topic aims to delve into the cutting edge integration of multi omics data analysis and bioinformatics technologies to enhance our understanding and treatment of solid tumors Our goal is to highlight the pivotal role these interdisciplinary fields play in deciphering the complexity of tumor biology facilitating groundbreaking discoveries in cancer care At the heart of this endeavor is the utilization of bioinformatics and multi omics approaches to dissect the intricate biological mechanisms underlying solid tumors This includes the examination of genomic epigenomic transcriptomic proteomic and metabolomic layers of tumor cells By harnessing the power of these technologies researchers are able to unearth the molecular signatures that define different tumor types uncovering novel biomarkers for early detection prognosis and therapeutic targeting One key focus of this research topic is the exploration of innovative computational tools and models that assist in the identification of molecular drivers of cancer progression and drug resistance mechanisms Understanding these aspects is crucial for the development of targeted therapeutic interventions and for circumventing resistance to existing treatments thereby substantially improving patient outcomes We aim to investigate the broader applications of bioinformatics in solid tumor research including the management and analysis of large scale datasets the discovery of patterns and correlations within data and the fostering of collaborative efforts across

disciplines and borders Specifically we will also consider the unique genetic and environmental landscapes of diverse populations with a special focus on the epidemiology and molecular characteristics of solid tumors in different regions In this Research Topic themes of interest include but are not limited to The application of genomics and other omics technologies in understanding the heterogeneity of solid tumors Bioinformatics tools and computational models for the analysis of complex cancer data The role of machine learning and artificial intelligence in advancing solid tumor diagnostics and therapeutics The identification and validation of biomarkers for cancer detection prognosis and therapy personalization Challenges and solutions in the translation of multi omics research into clinical practice Case studies on the development of novel therapeutic agents informed by bioinformatics and multi omics findings Assessing the impact of genetic diversity and environmental factors on the prevalence and aggressiveness of solid tumors across different populations Manuscripts consisting solely of bioinformatics or computational analysis of public genomic or transcriptomic databases which are not accompanied by robust and relevant validation clinical cohort or biological validation in vitro or in vivo are out of scope for this topic
