Learning From Data Artificial Intelligence And Statistics V:

Learning from Data Doug Fisher,Hans-J. Lenz,1996-05-02 This volume contains a revised collection of papers originally presented at the Fifth International Workshop on Artificial Intelligence and Statistics in 1995 The topics represented in this volume are diverse and include natural language application causality and graphical models classification learning knowledge discovery and exploratory data analysis The chapters illustrate the rich possibilities for interdisciplinary study at the interface of artificial intelligence and statistics The chapters vary in the background that they assume but moderate familiarity with techniques of artificial intelligence and statistics is desirable in most cases

Learning from Data Doug Fisher,Hans J. Lenz,1996-05-01 *Artificial Intelligence for Science and Engineering Applications* Shahab D. Mohaghegh,2024-04-01 Artificial Intelligence AI is defined as the simulation of human intelligence through the mimicking of the human brain for analysis modeling and decision making Science and engineering problem solving requires modeling of physical phenomena and humans approach the solution of scientific and engineering problems differently from other problems Artificial Intelligence for Science and Engineering Applications addresses the unique differences in how AI should be developed and used in science and engineering Through the inclusion of definitions and detailed examples this book describes the actual and realistic requirements as well as what characteristics must be avoided for correct and successful science and engineering applications of AI This book Offers a brief history of AI and covers science and engineering applications Explores the modeling of physical phenomena using AI Discusses explainable AI XAI applications Covers the ethics of AI in science and engineering Features real world case studies Offering a probing view into the unique nature of scientific and engineering exploration this book will be of interest to generalists and experts looking to expand their understanding of how AI can better tackle and advance technology and developments in scientific and engineering disciplines

International IEEE Conference on Tools for Artificial Intelligence* ,2005 Emotional Data Applications and Regulation of Artificial Intelligence in Society Rosa Ballardini,Rob van den Hoven van Genderen,Sari Järvinen,2025-01-22 This revolutionary new book on using AI to process human emotion data seeks to raise awareness for the topic thoroughly discuss it from a multidisciplinary perspective and by doing so disseminate research findings that elaborate on the current and future regulatory needs for the responsible and ethical development and application of emotional AI Biometric and psychological data of humans are the most sensitive data on human behavior The

book's objective is to provide a holistic understanding of key challenges and propose novel workable substantive and methodological solutions for navigating current and future legal and ethical needs and dilemmas regarding the processes of developing and using emotional AI. Although both the academic community and political decision makers continue to intensively discuss issues in the ethical regulation of AI, there is still a very limited understanding of both the opportunities and the risks in connection with emotional AI specifically. Yet emotional AI is one of the most promising areas of AI developments and applications. Several of these innovations could be a welcome change in our society as they could improve our well-being in various ways. That being said, these inventions require considerable investments. Thus legal incentives such as IPRs are crucial to supporting investment in these fields. Further, these innovations might have negative effects on the privacy and autonomy of natural persons, raising both legal and ethical concerns. Thus their legal and ethical acceptability as well as their societal acceptance might be challenged by several legal provisions in the EU such as the GDPR regulations on communications, social platforms, and marketing, and the draft AI Act. Yet the current legal landscape for emotional AI in Europe is anything but clear, an aspect that becomes even more apparent when we consider the global picture of the regulatory framework for emotional AI. In this book, a diverse team of internationally respected experts addresses these issues, engaging in a multidisciplinary study into techno-economic-legal developments concerning emotional AI, its impacts, and the need for action. The book offers in-depth scientific and societally relevant insights on the past, present, and future of AI in general, especially its many implications for law and policy. Although the primary target audience for the book are academics from the field of law, the book also offers sound guidance for legislators and general policymakers, as well as companies and organizations.
