strategy transforms the model formulation P into an equivalent formulation P In P the vehicle flow variables may be found as function of the commodity flow variables furthermore the vehicle capacity constraints need not be explicitly considered The decomposition however creates a situation whereby a commodity s incremental cost function on a given arc may contain concave and or convex portions This feature implies the presence of numerous local optima over which an exhaustive search for a global optimum is computationally infeasible Computational results from a series of test problems measure solution quality and algorithm efficiency SDW **Proceedings** ,2003 **Mathematics of Computation** ,1971 Original articles on all aspects of numerical mathematics book reviews mathematical tables and technical notes Covers advances in numerical analysis application of computer methods high speed calculating and other aids to computation **U.S. Government Research & Development Reports** ,1965 *Summer School DATASTAT ...* ,2001 **Advances in Neural Networks--ISSN ...** ,2005 **Polyhedral Combinatorics and the Acyclic Subdigraph Problem** Michael Jünger,1985 **Network Architectures, Management, and Applications II** S.
