Modeling Asset Prices for Algorithmic and High Frequency Trading Álvaro Cartea, 2014 Algorithmic Trading AT and High Frequency HF trading which are responsible for over 70 % of US stocks trading volume have greatly changed the microstructure dynamics of tick by tick stock data In this paper we employ a hidden Markov model to examine how the intra day dynamics of the stock market have changed and how to use this information to develop trading strategies at high frequencies In particular we show how to employ our model to submit limit orders to profit from the bid ask spread and we also provide evidence of how HF traders may profit from liquidity incentives liquidity rebates

We use data from February 2001 and February 2008 to show that while in 2001 the intra day states with shortest average durations waiting time between trades were also the ones with very few trades in 2008 the vast majority of trades took place in the states with shortest average durations Moreover in 2008 the states with shortest durations have the smallest price impact as measured by the volatility of price innovations *High Frequency Trading Models, + Website* Gewei Ye,2011

Stefan Höppel, 2014-02-01 In the last four decades technological progress led to an electrification of stock trading systems It was realized that the profitability of trading strategies could be increased by employing computer algorithms to trade autonomously This led to the implementation of High Frequency Trading HFT Theoretically HFT should increase efficiency in financial markets but it seems that at least under certain circumstances it causes market instability The aim of this paper is to discuss the effect of HFT on market quality and why HFT cannot be fully explained by the neoclassical theory of economics Therefore the controversial positions in literature will be presented and discussed It is especially referred to the influence of HFT on liquidity price discovery and volatility Primarily its negative effect on volatility seems to contravene the modern finance Furthermore in the course of this work it will be illustrated that by employing strict regulation of financial markets this negative impact cannot be reduced to a

sufficient extent in order for HFT to be characterized as market optimizing according to the neoclassical theory of economics
