

Chapter 6

Gabor Representations

6.1 Introduction

This is the last chapter of general background material before turning to the topic of field computation proper, which occupies the remainder of the book. The issue is the representation of of continuous fields (images, signals) extended in one or more continuous dimensions, including time. We begin with a fundamental way of quantifying the information carrying capacity of a signal, which was developed by Gabor and is complementary to Shannon's better known measure. This has interesting, mathematically rigorous, connections to the Heisenberg uncertainty principle and to wave-particle duality, which are important for applications in quantum computation. Interestingly, Gabor-like representations seem to be used by the brain, especially in primary visual cortex, and so we review the evidence for this. In any case, Gabor wavelets have proved to be valuable multi-resolution representations in many practical applications. While all the mathematical essentials are here (especially in the appendices to the chapter), our principal goal is to build intuition for the material.

Dennis Gabor is best known as the father of holography, in recognition of his development of its theory in 1947. In this chapter, however, we are concerned with his theory of communication, published in 1946 (Gabor 1946), two years before Claude Shannon's more famous theory (Shannon 1948). Gabor's theory was not simply an anticipation of Shannon's (as was Hartley's, for example); rather it addresses a completely different aspect of the nature of communication. It also provides a basis for the representation and processing

The Making of a Neuromorphic Visual System Christoph Rasche, 2005-12-06 This book presents an approach to the construction of a visual system which is behaviorally computationally and neurally motivated The goal is to characterize the process of visual categorization and to find a suitable representation format that can successfully deal with the structural variability existent within visual categories The book reviews past and existent theories of visual object and shape recognition in the fields of computer vision neuroscience and psychology The entire range

of computations is discussed as are region based approaches and are modeled with wave propagating networks A completely novel shape recognition architecture is proposed that can recognize simple shapes under various degraded conditions It is discussed how such networks can be used for constructing basic level object representations It is envisioned how those networks can be implemented using the method of neuromorphic engineering *Proceedings ,2003 Remixing the Civil War* Thomas J. Brown,2011-11-15 In 1961 the historian and poet Robert Penn Warren remarked that the Civil War is for the American imagination the great single event of our history This volume reconsiders whether fifty years later Warren s claim still holds true Essays from specialists in art literature and history examine how contemporary culture represents and interprets the Civil War They look at the works of more than thirty artists and writers as well as multiple movements political and social to reveal the many and provocative ways in which Americans engage the Civil War today The book includes chapters on the place of Abraham Lincoln in Barack Obama s presidential campaign controversies over the symbolism of the Confederate flag and the proliferation of Juneteenth observances *Remixing the Civil War* pays special attention to the works of African Americans and white southerners for whom the Civil War was a revolutionary and defining moment Such prominent scholars as Robert H Brinkmeyer Jr W Fitzhugh Brundage Kirk Savage and Elizabeth Young explore the works of major artists and lesser known figures including Bobbie Ann Mason Kara Walker Dario Robleto and John Huddleston The authors find that Americans today openly and playfully manipulate familiar images of the Civil War to explore the malleability and permeability of traditional social categories like national identity gender and race This collection continues the conversation Warren began fifty years ago although taking it in unorthodox and challenging directions to offer fresh and stimulating perspectives on the war s presence in the collective imagination of the nation *IEEE TENCON '90 ,1990*
