

CHAPTER – LEVERAGES

INTRODUCTION TO CAPITAL STRUCTURE

- Financing decision relates to the composition of relative proportion of various sources of finance. A Financial Manager compares the merits and demerits of different sources of finance while taking the financing decision.
- A business can be financed from either the shareholders' funds or borrowings from outside agencies.
- Shareholders' funds include equity share capital, preference share capital and accumulated profits. Equity has no fixed commitment regarding payment of dividend or principal amount and therefore, no risk is involved.
- Borrowings include borrowed funds like debentures and loans from financial institutions. The borrowed funds have to be paid back with interest and some amount of risk is involved if the principal and interest is not paid.
- Finally, it is the decision of the business to decide the ratio of borrowed funds and owned funds. However, most of the companies use a combination of both the shareholders' funds and borrowed funds.
- Whether the companies choose shareholders' funds or borrowed funds, each type of fund carries a cost. Borrowed funds involve interest payment whereas equities, as such do not have any fixed obligation but definitely they involve a cost. Both types of funds incur cost and this is the cost of capital to the company.

Meaning – Capital Structure refers to the mix of sources from where the long-term funds required in a business may be raised. In other words, it refers to the proportion of debt, preference capital and equity capital.

According to **Gerstenberg**, "Capital Structure of a company refers to composition or make up of its capitalization and it includes all long-term capital resources".

James C. Van Horne defines capital structure as "The mix of a firm's permanent long-term financing represented by debt, preferred stock and common stock equity".

Chapter Capital Structure And Leverage:

Capital Structure and Corporate Financing Decisions H. Kent Baker, Gerald S. Martin, 2011-03-31 A comprehensive guide to making better capital structure and corporate financing decisions in today's dynamic business environment. Given the dramatic changes that have recently occurred in the economy, the topic of capital structure and corporate financing decisions is critically important. The fact is that firms need to constantly revisit their portfolio of debt, equity, and hybrid securities to finance assets, operations, and future growth. *Capital Structure and Corporate Financing Decisions* provides an in-depth examination of critical capital structure topics, including discussions of basic capital structure components, key theories, and practices, and practical application in an increasingly complex corporate world. Throughout the book, it emphasizes how a sound capital structure simultaneously minimizes the firm's cost of capital and maximizes the value to shareholders. It offers a strategic focus that allows you to understand how financing decisions relate to a firm's overall corporate policy. Consists of contributed chapters from both academics and experienced professionals, offering a variety of perspectives and a rich interplay of ideas. Contains information from survey research describing actual financial practices of firms. This valuable resource takes a practical approach to capital structure by discussing why various theories make sense and how firms use them to solve problems and create wealth. In the wake of the recent financial crisis, the insights found here are essential to excelling in today's volatile business environment. *Capital Structure, Earnings Management, and Risk of Financial Distress* Pietro Gottardo, Anna Maria Moisello, 2018-09-24 This book analyzes the impacts that family control of firms has on capital structure choices, leverage, and the risk of financial distress, earnings management practices, and the relation between accounting choices and firm market value. For these purposes, longitudinal data on Italian family and non-family non-financial firms are closely analyzed. The Italian setting is of special interest in this context because family businesses account for 94% of GDP; families are particularly committed to maintaining control of firms, and the economy is bank-based rather than market-based. The analyses draw on the socioemotional wealth approach, which emphasizes the importance of the stock of emotional value in family firms, in combination with financial theories such as Pecking Order Theory, Trade-off Theory, and Agency Theory. The findings cast significant new light on differences between family and non-family firms and the effects of different forms of family influence. The book will have broad appeal for academics, managers, practitioners, and policymakers. Capital Structure Dynamics in Indian MSMEs Nufazil Altaf, Farooq Ahmad Shah, 2020-12-10 This book examines the capital structure dynamics in Indian MSMEs, offering empirical evidence to better understand the financial practices within entrepreneurial settings. Altaf and Shah, in this book, assess the financing pattern of Indian MSMEs, response of capital structure determinants to different macroeconomic states, links between working capital and capital structure, cash flow volatility, and capital structure, and also the impact of credit risk on capital structure and firm performance relationship. This book enthruses the audience looking to understand newer dynamics of capital structure and its interplay in the Indian MSMEs. **Capital**
