

Chapter 1 Section 2 Notes

The scientific method is a systematic process that is used to investigate natural phenomena. It involves making observations, asking questions, forming hypotheses, testing hypotheses, and drawing conclusions.

Primary and Secondary Sources

Information can come from two sources: primary sources and secondary sources. Primary sources are original information that is collected directly from the source.

They are written or recorded by the people who lived at a particular moment in time. Primary sources can be written, audio, video, or photographs. They provide a direct record of events and experiences.

Secondary sources are information that has been gathered from primary sources. They are often written by someone who did not experience the event directly. Examples include textbooks, encyclopedias, and biographies.

Secondary sources are useful for understanding events that happened long ago or in places that are difficult to visit. They provide a different perspective on the same events.

Researchers use both primary and secondary sources to gather information. They compare and contrast the information from both sources to get a more complete picture of an event.

Primary Sources

Primary sources are original information that is collected directly from the source. They are often written or recorded by the people who lived at a particular moment in time. Examples include diaries, letters, photographs, and audio recordings.

Secondary Sources

Secondary sources are information that has been gathered from primary sources.
