

Chapter 1
Properties of Matter

Properties of Matter

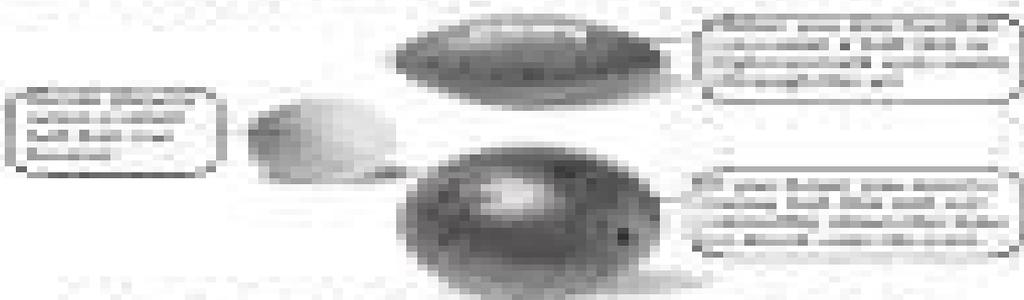

QUESTIONS

Are you able to measure, how these quantities are related?

- Why, according to you, are all these quantities grouped together?
- Why are these quantities and how they are related grouped together?

What are Physical Properties?

Start with the matter in the chapter before you start to do this chapter. Discuss it with your friends.

If physical properties of substances can be observed without changing the identity of the substance, then these properties of an object are called its physical properties. For example, you can identify an object's colour, shape, size, or weight, without changing the properties of the object. We distinguish by the properties of the substance the object consists of.

Many of the physical properties of substances that make up objects can be measured. These properties include density, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties from a smaller amount of the material. Other physical properties do not depend on how much of the material you have. They show that no matter how large or small a sample of material is, the particular property is always the same.

LEARNING OBJECTIVES

By the end of this chapter, you should be able to: identify physical and chemical properties of substances; distinguish between physical and chemical changes; and describe the physical and chemical changes that occur in everyday life.

LEARNING GOALS

By the end of this chapter, you should be able to: identify physical and chemical changes; and describe the physical and chemical changes that occur in everyday life.

LEARNING OBJECTIVES

By the end of this chapter, you should be able to: identify physical and chemical changes; and describe the physical and chemical changes that occur in everyday life.
