Reinforced Concrete Designer's Handbook Charles E. Reynolds, James C. Steedman, Anthony J. Threlfall, 2007-08-07

This classic and essential work has been thoroughly revised and updated in line with the requirements of new codes and standards which have been introduced in recent years including the new Eurocode as well as up to date British Standards. It provides a general introduction along with details of analysis and design of a wide range of structures and examination of design according to British and then European Codes. Highly illustrated with numerous line diagrams, tables and worked examples. Reynolds's Reinforced Concrete Designer's Handbook is a unique resource providing comprehensive guidance that enables the engineer to analyze and design reinforced concrete buildings, bridges, retaining walls and containment structures. Written for structural engineers, contractors, consulting engineers, local and health authorities and utilities, this is also excellent for civil and architecture departments in universities and FE colleges.

Model Uncertainties in Foundation

Design Chong Tang, Kok-Kwang Phoon, 2021-03-16. Model Uncertainties in Foundation Design is unique in the compilation of the largest and the most diverse load test databases to date covering many foundation types: shallow foundations, spudcans, driven piles, drilled shafts, rock sockets and helical piles, and a wide range of ground conditions: soil to soft rock. All databases with names prefixed by NUS are available upon request. This book presents a comprehensive evaluation of the model factor, mean bias and coefficient of variation (COV) for ultimate and serviceability limit state based on these databases. These statistics can be used directly for AASHTO LRFD calibration. Besides load test databases, performance databases for other geo structures and their model factor statistics are provided. Based on this extensive literature survey, a practical three-tier scheme for classifying the model uncertainty of geo structures according to the model factor mean and COV is proposed. This empirically grounded scheme can underpin the calibration of resistance factors as a function of the degree of understanding a concept already adopted in the Canadian Highway Bridge Design Code and being considered for the new draft for Eurocode 7 Part 1 EN 1997-1-202x. The helical pile research in Chapter 7 was recognised by the 2020 ASCE Norman Medal.

Databases for Data-Centric Geotechnics Chong Tang, Kok-Kwang Phoon, 2024-12-20. Databases for Data-Centric

Geotechnics forms a definitive reference and guide to databases in geotechnical and rock engineering to enhance decision making in geotechnical practice using data-driven methods. This second volume pertains to geotechnical structures. The opening chapter presents a substantial survey of performance databases and the effectiveness of our prediction models in matching the field measurements in these databases based on: 1) full scale field tests; 2) 39 prediction exercises organized as a part of international conferences; and 3) comparison between numerical analyses and in situ or field measurements conducted by the French LCPC. The focus is on the evaluation of the statistical degree of confidence in predicting various quantities of interest such as capacity and deformation. The following 18 chapters then present databases on the performance of shallow foundations, spudcan foundations, deep foundations, anchors and pipelines, retaining systems and excavations and landslides.

The databases were compiled from studies undertaken in many countries such as Australia Belgium Bolivia Brazil Canada China Egypt France Germany Hungary Iran Ireland Japan Kenya Malaysia Netherlands Norway Poland Portugal South Africa the United Kingdom and the United States This volume on geotechnical structures is a companion to the volume on site characterization Databases for Data Centric Geotechnics represents the most diverse and comprehensive assembly of database research in a single publication consisting of two volumes to date It follows from Model Uncertainties for Foundation Design also published by CRC Press and suits specialist geotechnical engineers researchers and graduate students Chapter 10 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution CC BY 4.0 license

ICE Manual of Geotechnical Engineering Volume 2 Hilary Skinner, D G Toll, Kelvin Higgins, Mike Brown, John Burland, 2023-11-17 ICE Manual of Geotechnical Engineering Second edition brings together an exceptional breadth of material to provide a definitive reference on geotechnical engineering solutions Written and edited by leading specialists each chapter provides contemporary guidance and best practice knowledge for civil and structural engineers in the field
