perception sharing and adoption of best practices is mostly attributed to the activity called benchmarking. Obtaining maximum value from best practices is usually attributed to knowledge management. One is an extension of the other. Knowledge management can be looked upon as the management of knowledge about best practices whether in the mind as human capital or as intellectual assets or property. Most organizations now recognize the absolute imperative for the identification and collection of best practices through benchmarking. It can be a strategic strength when practiced and a fatal weakness if not pursued. But there is a serious disconnection in the exchange and adoption process. Despite significant advances in the approaches and technology that pursue improvement (six sigma process redesign, customer relationship management, etc.) organizations continue to experience great difficulty in successfully transferring leading practices. Some would say these are exemplary, proven, observed, or promising, but in the final analysis they are best practices with the objective of becoming world class. More insight is needed into how leading or best practices are transferred and adopted, said differently, best practices for knowledge transfer or knowledge management.

Second European Conference on Knowledge Management Dan Remenyi, 2001 Knowledge-based Intelligent Information Engineering Systems and Allied Technologies Ernesto Damiani, 2002. Annotation: The book contains the Proceedings of KES 2002, the Sixth Edition of the Knowledge Based Intelligent Information Engineering Systems International Conference. The conference papers presented new research results focusing on three main areas of interest: Generic Intelligent Techniques. This area includes results on basic disciplines underlying knowledge based and intelligent systems such as artificial neural networks, machine learning, knowledge based systems, case based reasoning, intelligent agents, and soft computing. Applications of Intelligent Systems. The second area presents results on vertical applications of intelligent systems including condition monitoring, fault diagnosis, industrial control, medical systems, image processing, financial stock market monitoring and prediction, natural language processing, and others. Allied Technologies. This area includes novel contributions on intelligent systems applications to traditional research fields such as digital and computer communications, signal processing, virtual reality, multi media, web based technologies, human computer interfaces, and software engineering.
