There is a growing acceptance among many beekeepers of the principles of minimum intervention and avoidance of chemicals in the hive Beekeepers with standard frame hives will find their colonies benefit when they care for their bees as described in this book This will result in reduced stress happier bees and sustainably obtained honey The Natural Beekeeping movement has gained many followers people concerned with the plight of bees and their environment using Top Bar hives including the Warr and skeps With the increased scope and flexibility offered by frame hives they can gain a better understanding of the behaviour of their bees and still adhere to the principles of Natural Beekeeping I have included a chapter that shows how my methods differ from those conventional practices taught by national beekeeping associations which I maintain are not beneficial This summarises my beekeeping practices and rationale

- 1 I do not apply chemicals or medicate my hives Bees know how to use what nature provides minerals from the soil and water sources propolis from plants complex vitamins and essential oils from flowers nectar and pollen
- 2 I do not kill queen cells in order to prevent swarming This may delay a prime swarm but secondary swarms will emerge and deplete the hive
- 3 I do not clip the queen's wing to prevent her flying with the swarm I believe it is a cruel practice and damages the queen and weakens the colony
- 4 I do not mark the queen Marking the queen is a difficult operation and you may damage her whether you use paint or a sticky label What is the point in marking the queen You can tell if the hive has a laying queen if there is brood with young larvae or eggs in the middle brood frames You do not even need to open the hive if the bees are bringing in pollen
- 5 I do not cull drones in order to remove drone cells whose larvae may be parasitised by varroa It prevents the natural reproduction of those colonies that are inherently resistant to varroa A large population of drones from many hives provide a wide variety of genes and vigour to the offspring of a well mated queen
- 6 I do not feed my established hives Many conventional beekeepers feed sugar syrup as a matter of course before winter to make up for the honey they have removed The bees own honey is the best food they can get for surviving winter and it helps the colony to build up its strength in the spring Instead of feeding the hive I leave enough honey for it to over winter This pays dividends in a stronger colony for the following year and therefore a greater yield of honey
- 7 I do not re queen a hive by removing the old queen Besides being cruel and ungrateful you are losing valuable genetic material that in nature would survive in her swarm or a superseding daughter
- 8 I no longer buy wax foundation which is made from beeswax supplied by other beekeepers many who follow the advice of government bodies and national and beekeeping associations and put various chemicals and medicines in their hives Beeswax is very absorbent of these poisons and I don't want them in my hives
- 9 I do not obtain bees from outside my local area Importing bees from

distant localities or foreign countries is bad it puts stress on the bees and the bees are not acclimatised to their new localities
Local bees will have adapted genetically to their environment and climate All my colonies have descended from swarms most of which entered my empty hives and bait hives with no effort on my part Swarming bees are healthy bees My hives have been cared for to the benefit of the bees and their honey has been harvested sustainably a pure product of what the bees have gathered themselves

Save the Bees with Natural Backyard Hives Rob McFarland, Chelsea

McFarland, 2015-11-10 The husband and wife team behind the nonprofit HoneyLove make the case that beekeeping ought to be treated as more than a hobby or money making enterprise It is an entrance into a complex and sometimes fierce world that must be engaged and understood on its own terms

The Practical Queen Breeder Michael Bush, 2020-05 Short This is my current method of queen breeding and rearing after many years of trying various techniques It is the one I find most reliable in getting cells started finished and mated The reason I do this method is that it has the most success in my experience under adverse conditions as well as good conditions

Natural Beekeeping (Book & DVD Bundle) Ross Conrad, 2013-03-05 Today's beekeepers face unprecedented challenges a fact that is now front page news with the spread of colony collapse disorder Newly introduced pests like varroa and tracheal mites have made chemical treatment of hives standard practice but pest resistance is building which in turn creates demand for new and even more toxic chemicals In fact there is evidence that chemical treatments are making matters worse It's time for a new approach In this set which includes the new full color Natural Beekeeping Revised and Expanded Edition and a DVD workshop Ross Conrad brings together the best do no harm strategies for keeping honeybees healthy and productive all of which are covered in a thoughtful matter of fact way About Natural Beekeeping Revised and Expanded Edition Now revised and updated with new resources and including full color photos throughout Natural Beekeeping offers all the latest information in a book that has already proven invaluable for organic beekeepers The new edition offers the same holistic sensible alternative to conventional chemical practices with a program of natural hive management but offers new sections on a wide range of subjects including The basics of bee biology and anatomy Urban beekeeping Identifying and working with queens Parasitic mite control and Hive diseases Also a completely new chapter on marketing provides valuable advice for anyone who intends to sell a wide range of hive products Natural Beekeeping covers nontoxic methods of controlling mites eliminating American foulbrood disease without the use of antibiotics selective breeding for naturally resistant bees and many other detailed management techniques which are covered in a thoughtful matter of fact way Whether you are a novice looking to get started with bees an experienced apiculturist looking for ideas to develop an integrated pest management approach or someone who wants to sell honey at a premium price this is the book you've been waiting for About Natural Beekeeping with Ross Conrad DVD In this filmed workshop Ross Conrad flips the script on traditional approaches by proposing a program of selective breeding and natural hive management The video

presents a comprehensive survey of natural beekeeping methods and challenges including segments filmed in the field. It offers practical information that every aspiring beekeeper needs to know, everything from basic hive equipment to working with your bees to harvesting and processing honey. Natural Beekeeping with the Warré Hive David Heaf, 2013. Keeping bees in a more natural way is growing in popularity throughout the world. Older hive designs are being reappraised and methods that have been used for over a century are being questioned. The People's Hive of Abbots Mill, Warré 1867-1951 is one of the older designs that beekeepers find particularly attractive. Several commercial honey producers have already adapted it to fit their needs. Warré one size box with top bars, natural comb, and insulating quilt create ideal conditions for colony vitality and survival, as well as reducing consumption of honey stores in winter. The hive is now used worldwide in climates ranging from the tropics to the tundra. Page 4 of cover.
