Simon Deakin, Christopher Markou, 2020-11-26 What does computable law mean for the autonomy authority and legitimacy of the legal system Are we witnessing a shift from Rule of Law to a new Rule of Technology Should we even build these things in the first place This unique volume collects original papers by a group of leading international scholars to address some of the fascinating questions raised by the encroachment of Artificial Intelligence AI into more aspects of legal process administration and culture Weighing near term benefits against the longer term and potentially path dependent implications of replacing human legal authority with computational systems this volume pushes back against the more uncritical accounts of AI in law and the eagerness of scholars governments and LegalTech developers to overlook the more fundamental and perhaps bigger picture ramifications of computable law With contributions by Simon Deakin Christopher Markou Mireille Hildebrandt Roger Brownsword Sylvie Delacroix Lyria Bennet Moses Ryan Abbott Jennifer Cobbe Lily Hands John Morison Alex Sarch and Dilan Thampapillai as well as a foreword from Frank Pasquale

Critical Digital Humanities James E Dobson, 2019-03-16 Can established humanities methods coexist with computational thinking It is one of the major questions in humanities research today as scholars increasingly adopt sophisticated data science for their work James E Dobson explores the opportunities and complications faced by humanists in this new era Though the study and interpretation of texts alongside sophisticated computational tools can serve scholarship these methods cannot replace existing frameworks As Dobson shows ideas of scientific validity cannot easily nor should be adapted for humanities research because digital humanities unlike science lack a leading edge horizon charting the frontiers of inquiry Instead the methods of digital humanities require a constant rereading At the same time suspicious and critical readings of digital methodologies make it unwise for scholars to defer to computational methods Humanists must examine the tools including the assumptions that went into the codes and algorithms and questions surrounding their own use of digital technology in research Insightful and forward thinking *Critical Digital Humanities* lays out a new path of humanistic inquiry that merges critical theory and computational science

Algorithms Unlocked Elian Greystone, 2025-08 Crack the Code Behind Every Great Software

System Algorithms Unlocked is your accessible and practical guide to the essential algorithms that power modern software. Whether you're a student, self-taught developer, or professional engineer, this book helps you understand, implement, and apply core algorithms used in everyday applications, from search engines and databases to social networks and recommendation systems. With clear explanations, pseudocode, and real-world examples, you'll learn not just how algorithms work but why they're essential to fast, efficient, and scalable computing.

Own the A.I. Revolution: Unlock Your Artificial Intelligence Strategy to Disrupt Your Competition Neil Sahota, Michael Ashley, 2019-05-24. Disrupt your industry, boost profitability, and grow your business with a powerful AI strategy. Artificial Intelligence (AI) is on the verge of disrupting every domain of human existence. What does that mean for your business? Everything. Building on the power of AI is the factor that will determine success or failure in the very near future, and this in-depth guide from the man who designed the AI system that famously won Jeopardy! provides everything you need to be a leader in this revolution. *Own the AI Revolution* provides a future-forward look at AI, how it will look in the coming years, the countless business opportunities it will offer, the risks that come with it, and delivers the knowledge you need to navigate it all in real and practical ways. You'll learn how to find the right off-the-shelf AI solutions for your needs, perform a cost-benefit analysis of implementing AI into your business strategy, train and test AI before fully committing, assemble superior teams to steer your AI future, ensure you remain current and ahead of the curve. You'll also find interviews with today's top experts and AI thought leaders on the exciting ways organizations are already transforming themselves through this revolutionary technology. AI sounds scary to some, but the best business leaders see it as an opportunity, a way not only to drive profits and outpace the competition but to build value for customers and make the world a better place. It's time to face our brave new AI-driven world and make sure you own the AI Revolution.

Operating Systems Raymond W. Turner, 1986. Real Time Programming 1998 (WRTP '98) Lichen Zhang, A. H. Frigeri, Liangchi Zhang, Wolfgang A. Halang, 1998. With its tradition of more than three decades, the IFAC/IFIP Workshop on Real Time Programming (WRTP) has become an excellent forum for exchanging information on recent technological advances and practices in real-time computing, a field that is becoming an essential enabling discipline of both control engineering and computer science and engineering. As there is an accelerated growth of demands for the functionality and dependability of real-time systems, our intellectual and engineering abilities are being challenged to come up with practical solutions to the problems faced in the design and development of complex real-time systems. The Workshop on Real Time Programming provides an opportunity to assess the state of the art, to present new results, and to discuss possible lines of future developments. Primarily, it focuses on software development for real-time systems and real-time operating systems. This 1998 Workshop covered the latest research and developments in real-time communication and formal specification, operating systems, and performance analysis, scheduling, use of neural networks in real-time systems, embedded systems, and programming methodologies. Contributions came from Europe, North America, Australia, and the Far East. In

addition to these high quality technical papers the programme also featured three world renowned keynote speakers

Memorandum , **Using R to Unlock the Value of Big Data: Big Data Analytics with Oracle R Enterprise and Oracle R Connector for Hadoop** Mark Hornick, Tom Plunkett, 2013-06-27 Publisher's Note Products purchased from Third Party sellers are not guaranteed by the publisher for quality authenticity or access to any online entitlements included with the product The Oracle Press Guide to Big Data Analytics using R Cowritten by members of the Big Data team at Oracle this Oracle Press book focuses on analyzing data with R while making it scalable using Oracle's R technologies Using R to Unlock the Value of Big Data provides an introduction to open source R and describes issues with traditional R and database interaction The book then offers in depth coverage of Oracle's strategic R offerings Oracle R Enterprise Oracle R Distribution Oracle and Oracle R Connector for Hadoop You can practice your new skills using the end of chapter exercises **Report** ,1989 **Introduction to Multichip Modules** Naveed A. Sherwani, Qiong Yu, Sandeep Badida, 1995-11-23 Advantages of MCMs over traditional packaging methods for electronic based applications in computers aviation and the military Introduction to Multichip Modules discusses both custom built MCMs and programmable MCMs and their role in reducing cost and improving turnaround time An invaluable resource for students and professionals in electrical engineering who design MCMs and MCM based systems and for those in computer science who develop CAD tools for MCMs this **Restructuring Symbolic Programs for Concurrent Execution on Multiprocessors** James R. Larus, 1989 CURARE the program restructurer described in this dissertation automatically transforms a sequential Lisp program into an equivalent concurrent program that executes on a multiprocessor CURARE first analyzes a program to find its control and data dependences This analysis is most difficult for references to structures connected by pointers CURARE uses a new data dependence algorithm which finds and classifies these dependencies The analysis is conservative and may detect conflicts that do not arise in practice A programmer can temper and refine its results with declarations Dependences constrain the program's concurrent execution because in general two conflicting statements cannot execute in a different order without affecting the program's result A restructurer must know all dependences in order to preserve them However not all dependences are essential to produce the program's result CURARE attempts to transform the program so it computes its result with fewer conflicts An optimized program will execute with less synchronization and more concurrency CURARE then examines loops in a program to find those that are unconstrained or lightly constrained by dependences By necessity CURARE treats recursive functions as loops and does not limit itself to explicit program loops Recursive functions offer several advantages over explicit loops since they provide a convenient framework for inserting locks and handling the dynamic behaviour of symbolic programs Loops that are suitable for concurrent execution are changed to execute on a set of concurrent server processes These servers execute single loop iterations and therefore need to be extremely inexpensive to invoke Restructured programs execute significantly faster than the original sequential programs This improvement is large

enough to attract programmers to a multiprocessor particularly since it requires little effort on their part Although restructured programs may not make optimal use of a multiprocessor s parallelism they make good use of a programmer s time **Proceedings** ,2000 Beginning to Unlock the Black Box in the HR Firm Performance Relationship Timothy Michael Gardner,2001
