

# CLUTCH INSTALLATION INSTRUCTIONS & TECHNICAL GUIDE

1. These instructions apply to all PowerTrax Technology, Inc. (PTT) multi-disc racing clutches from 4-1/2" up to 7-1/2" disc diameter. Before proceeding, ensure that you have selected, and received, the correct clutch for your application.
2. Any components that may affect clutch performance must be in good condition and suitable for the use for which they are intended. (i.e. Distributing System, clutch-release system, pilot bearing, etc.)
3. Check that pilot bearing in the crankshaft is properly lubed & free of excess oil or dirt, with no evidence of scoring, rust or corrosion, cracking or spalling. A PTT Synthetic-Lube clutch adjustment shaft can be used for checking the proper size of the pilot bearing. It fits a properly sized pilot on the end. Simply insert it into your pilot bearing and check for correct fit.
4. The transmission input shaft must be accurately aligned to the engine crankshaft. The following performs this critical alignment function. Check your distributing to insure that the transmission input shaft is concentric within 0.002" (2 mils) misalignment maximum to the engine crankshaft. Two flats of the input shaft face to fit inside in the transmission housing surface of the distributing shaft 0.002" (2 mils) or less. Detailed instructions for this inspection procedure can be found at the PTT website ([www.powertrax.com](http://www.powertrax.com)). Performing this step avoids excessive input shaft wear on the clutch hub and input shaft. It also helps prevent clutch chatter, free shifting, and other problems.
5. Insure the input shaft and clutch disc rollers are clean and dry. Do not lubricate. Clean the new clutch disc rollers for proper engagement on your input shaft. They must fit snugly on the input shaft splines and not bind, swimming or bottom out. Take the opportunity now to look at the input shaft splines closely to insure that they do not even show signs of scoring or wear.
6. Insure the clutch bolts that come with your clutch, from the backside of the flywheel, (Some flywheels do not require this.) Check the used flywheel mounting surface for corrosion, pitting, cracks, or excessive flats. The flywheel must be aligned to adjoining flat on the crank mounting surface, with no evidence of scoring inside the flywheel. Torque the flywheel mounting bolts according to the engine or crank manufacturer's instructions. PTT recommends the use of a medium-strength pressure treated locking compound (Loctite® or similar product) (DO NOT USE STAIN RESISTANT).
7. Check to see that the clutch disc release the flywheel hub is interference fit with the flywheel bolts or crankshaft.
8. **Decrease the clutch disc gaps, finger plates, pressure plate and the housing prior to installation. Keep finger settings clean and dry, taking special care to avoid oil or grease contamination.**
9. **Check that the clutch is assembled correctly.** If your discs are labeled showing clutch disc orientation, install the clutch discs according to the labels. On our disc clutches the most used stamped PTT label shows the engine on the disc clutches, the flywheel bolts, stamped PTT, and the timing plate area. On three disc clutches, the flat most needs stamped PTT on the top and bolts must face down after it is the center disc can be installed in either direction. Flat disc clutches need to have the flat bolts angled up in the same position. Please refer to the drawing below for proper hub assembly on to the crankshaft that came with your clutch.

**NOTE:** All clutch parts shown here are transmission side up; engagement side down.
